REPORT
OF THE
HEALTH DEPARTMENT
OF THE
CITY AND COUNTY OF SAN FRANCISCO
FOR THE
FISCAL YEAR ENDING JUNE 30, 1897

ARTHUR S. LOVELACE, M. D., Health Officer

W. P. CHALMERS, M. D., Quarantine Officer

A. P. O'BRIEN, M. D., City Physician

CONRAD WEIL, M. D., Police Surgeon

J. M. WILLIAMSON, M. D., Supt. Physician City and
County Hospital

E. A. REDDY, Superintendent City and County Almshouse

EDMOND GODCHAUX, Secretary Health Department

ALSO

Health Inspectors, Market Inspectors, Plumbing Inspectors, Bath and
Laundry Inspectors, Bakery Inspectors, Disinterment Inspectors,
Bureau of Food Inspection, Chemist and Bacteriologist.

TABLE OF CONTENTS.

BOARD OF HEALTH—Report (James D. Phelan, Mayor; G. J. Fitzgibbon, M. D.; Henry H. Hart, M. D.; John F. Morse, M. D.; J. M. Williamson, M. D.).....	
Remarks and Recommendations on the Reform effected in Sanitary Requirements, Inspection of Food Supplies, Prevention of Sale of Adulterated Milk, Food and Fruit—Increase of Health Inspectors, Appointment of Veterinary Surgeon, Bacteriologist, Chemist, etc., Orders Recommended for the Protection of the Public Health, Nuisances in Chinatown and the Latin Quarter Abated, Bills to confer Additional Powers defeated at the last session of the Legislature—Mortality Reports—Quarantine Service—Receiving Hospital crippled through lack of Surgical Instruments, Accommodations for Insane Persons Improved, Branch Receiving Hospital Established and Two Modern Ambulances Provided, etc	5-14
Members and Officers of the Health Department.....	2-4
HEALTH OFFICER'S REPORT (A. S. Lovelace, M.D.).....	15-16
Condition of Health Department, improvements carried out and progress made in the enforcement of the Sanitary Regulations—Inspection of Plumbing and Meat Supplies curtailed owing to inadequate number of Inspectors, etc.....	15-16
List of Mortality Tables Included in Report.....	17-18
Tabular Statistics—Alphabetical List of the Causes of Death.....	19-20
“ “ Monthly Distribution of Mortality from the Year 1872-73.....	21
“ “ Mortality, Arranged According to Classes, from the Year 1872-73	22
“ “ Estimated Population, Deaths and Death Rate from the Year 1872-73.....	23
“ “ Mortality Report, Showing Cause of Death, Age, Sex and Nativity of Decedents, for Fiscal Year.....	24-39
“ “ Report of Deaths Registered during First Half of Fiscal Year....	40-55
“ “ Report of Deaths Registered during Last Half of Fiscal Year..	56-71
“ “ Report of Deaths Registered by Months.....	72-143
“ “ Report of Deaths Registered During Fiscal Year Showing Age, Race, Nativity and Locality.....	144-145
“ “ Comparative Annual Statement of Deaths Registered During Calendar Years from 1886 to 1896 inclusive.	146
“ “ Yearly Distribution of Mortality from the Year 1872-73 by Classes, of Mongolians.....	147-148

REPORT

OF THE

BOARD OF HEALTH

OF THE CITY AND COUNTY OF SAN FRANCISCO.

*To the Honorable the Mayor
Of the City and County of San Francisco—*

SIR: In accordance with the plan inaugurated by this Board at the close of the fiscal year ending June 30th, 1896, we transmit to you herewith a brief outline of the principal work accomplished by the Health Department since the presentation of the last annual report.

Through the liberality of the last Board of Supervisors, the Health Department has had the opportunity to increase its efficiency and to engage more extensively in the task of investigating the sanitary requirements of the community than had been possible during any previous administration in the history of the city government. For years this Department had been forced by civic penury, if not by its own contented lethargy, to maintain its existence on the meagre and insufficient appropriation of \$26,000 per annum. The number of employees was the same as when the Department was first organized, while the population of the city had in the meantime nearly doubled and the unsanitary conditions due to such increase of inhabitants greatly augmented.

In September of the past fiscal year the sum of \$65,000 was set apart by the Board of Supervisors for the salaries and expenses of the Health Department, and as soon as this fund was available immediate steps were taken to regulate its expenditure in the best interests of the city.

The number of Health Inspectors has been increased from six to eight, and the city redistricted, thus rendering it possible to secure a more thorough and detailed inspection than with the limited force formerly employed.

An Inspector of Bakeries has been appointed, who, since the commencement of his term of office, has inspected and caused to be placed in a proper sanitary state 257 bakeries. The filthy and disease-breeding surroundings

which formerly appertained to many of these bakeshops have been entirely abated by the exertions of this officer, and his system of daily inspection effectively prevents a relapse into their former deplorable condition.

Two Bath and Laundry Inspectors have been added to the list of employees. Every laundry in the city, including those conducted by Chinese, has been inspected, and wherever found lacking in sanitation has been cleansed and renovated. Cement floors in wash-rooms have been insisted upon; the walls have been stripped of their moldy wall paper and coated with fresh lime; the inmates have been prohibited from sleeping under the ironing tables, and, through the Board of Supervisors, an ordinance has been passed forbidding the spraying of clothes by means of water emitted from the mouth.

To facilitate the proper installation and inspection of plumbing, Health Inspectors are now required to refer all work of this nature to the Plumbing Inspectors. The duties of the Plumbing Inspectors have greatly increased, and two assistants additional have been placed on the roll of this branch of the Department. A Sewer Inspector has also been appointed and placed under the orders of the Chief Plumbing Inspector. New plumbing laws have been adopted and submitted to the Board of Supervisors for their approval. These laws contain the best features of those at present in force in the principal Eastern cities. A rigorous supervision of all plumbing work in new buildings, and repairs in old buildings, is constantly being carried out. Vast amount of imperfect plumbing in the Chinese and Latin quarters has been condemned and replaced by that of a modern type. In many of the public and private schools new closets and additional sanitary appliances have been placed.

The market inspection is not what it should be. The force engaged in this particular division of the Department is entirely inadequate, and the number of inspectors should be doubled. It is an impossibility for the Chief Market Inspector and his three assistants to inspect all meat in this city intended for human consumption. At the present time the duty imposed upon the Chief is that of examining meat exposed for sale in the various public markets and retail shops. One assistant is required to patrol the approaches to the city from the south and west; another is detailed to watch consignments arriving at the water-front, while the fourth is on duty in Butchertown—the most important detail of all.

The inspection in Butchertown imperatively requires a larger force of men in order to examine properly the meat coming from that source. Since the withdrawal of the U. S. Government Inspectors from these abattoirs, the necessity of reinforced inspection by the local officers has become more urgent.

Notwithstanding the paucity of Market Inspectors, the results of their inspection have been to a marked extent very satisfactory. Meat exposed for sale, as well as that furnished to public institutions, is of a quality superior to that formerly sold. Many condemnations and seizures of immature

and diseased meat have been enforced and several arrests have been made, all but one of which resulted in conviction. One offender received a maximum sentence of six months in the County jail as a penalty for selling diseased meat.

Fish markets have been carefully watched and frequent seizures made. Large quantities of putrid fish have been condemned and destroyed. The traffic in shark meat, sold for halibut, has to a great extent been abolished.

For the betterment of the market inspection there is need of new and stringent city ordinances; one requiring both wholesale and retail butchers to register in, and receive permits from, the Health Department, following the same plan as in the case of milk dealers; and another prohibiting the exposure of meat to the dust from the streets during transit, and requiring all meat wagons to be properly covered. The hanging of meat outside of butcher shops, where it gathers every form of impurity, should also be forbidden.

Under the increased appropriation the Board of Health has been enabled to establish and equip two laboratories—one for the examination of food, the other for bacteriological investigation. An official Chemist with an assistant, has been placed in charge of the chemical laboratory and is constantly engaged in the analysis of food-stuffs. In the bacteriological laboratory valuable services have been rendered. A systematic plan has been adopted for the verification of diagnosis in cases of diphtheria reported by physicians to this Department. Sterilized swabs placed in sterilized tubes are prepared in this laboratory and forwarded to various stations in the city designated officially by this Board, where they are at the disposal of all physicians. In reporting cases of diphtheria, physicians now submit the secretions from the throats of suspected cases by means of these swabs, which, after being used, are replaced in the tubes and forwarded to the laboratory. Cultures are then made and the character of the disease determined, reports being furnished within a few hours to the physicians interested. Investigations are also continually being made in this laboratory of *post mortem* specimens taken from cattle slaughtered by order of the Veterinary Surgeon.

One of the most important acts of this Department during the past year has been the founding of a Bureau of Food Inspection. This bureau is under the direction of the Chief Food Inspector, whose staff consists of fourteen food and milk inspectors. Four food inspection stations have been established, at each of which day and night inspectors are constantly on duty for the inspection of milk. These stations are so located that every consignment of milk coming to this city passes through the station situated on the particular route by which it enters. The milk is subjected to different tests in order to determine its quality, and when found satisfactory, the vehicle in which it is carried is labeled with the inspection tag of the Department. All persons selling milk in this city are now required to obtain a permit from the Health Department before being licensed, and the Department has the power to revoke permits in any and all cases of violation of the milk ordinance.

Two Milk Inspectors patrol the city daily, taking samples of milk from the different hotels and restaurants and taking the same to the laboratory of the Food Department, where tests are made to determine its purity. Very rarely has a sample of milk taken by these inspectors failed to come up to the official standard, which fact demonstrates conclusively the success of inspection at the stations.

Inspectors of the Food Bureau are authorized to purchase samples of foods from different stores in the city, the same to be placed in the hands of the Chemist for analysis. The Chemist renders monthly reports, and where his analysis shows articles purchased to be adulterations or substitutions, warrants are promptly issued for the arrest of the offending dealers. All brands of condensed milks, catsups and jellies have been inspected and analyzed, and many palpable and startling adulterations made known to the public. Several dealers who have made a specialty of vending imitation food-stuffs have, by reason of these reports of the Chemist, been forced to retire from the trade, and others have been heavily fined and compelled to stock their shelves with genuine and unadulterated goods. This Bureau has adopted an official standard for catsups which has been utilized and adopted by Eastern firms who have been engaged in the importation and manufacture of this commodity.

By order of the Chief Food Inspector, a close watch has been kept upon shipments of fruit arriving in this city. Large quantities have been found unfit for human consumption and have been condemned and thrown into the bay. The practice engaged in by careless dealers of using old and dirty boxes for the packing of fruit has been checked. Berries and other fresh fruits brought into this city are now required to be packed in new and clean boxes.

Another important feature in the improvement of the Health Department has been the appointment of a Veterinary Surgeon. During the year 152 dairies have been inspected, with herds aggregating 8,300 head of cattle. The application of the U. S. tuberculin tests, officially adopted by this Board, was deferred to the latter part of the year, owing to the earnest plea of interested dairymen, who petitioned the Board of Health to postpone its activity in this direction until legislative measures could be secured providing compensation for cattle destroyed. The Board acceded to this request, but the Legislature having taken no action in the premises, it was not deemed advisable to delay longer the enforcement of this important test, and during the last three months the cattle in several of the largest dairies have been subjected to the United States test, and all those found in any degree to be afflicted with tuberculosis were immediately slaughtered.

The appointment of a Public Vaccination Officer, to be in attendance at regular hours in the Health Office, has been productive of good results. The regulation of requiring children who have been vaccinated to return for inspection before receiving a certificate entitling them to admission to the public schools, enhances the efficiency of this service. During the past

fiscal year the total number of free vaccinations amounted to 8,517—being an average of over 700 per month.

The largest number of birth certificates ever recorded in the annals of this Department has been filed in the office of the Secretary during the past year. The following figures of comparison are of interest :

Total number of births, 1894-95.....	3,755
Total number of births, 1895-96.....	5,020
Total number of births, 1896-97.....	5,159

The Board of Health does not claim to have strengthened the virility or improved the fecundity of the people of San Francisco, nor does it boast of a more prolific clientele than the neighboring city of Oakland, but it does claim that by its constant reminders to physicians and midwives of failures to register births occurring in their practice, and latterly the arrest and conviction of those who have been derelict, to have brought about promptness in the filing of birth reports.

The statistical work of the Board has been facilitated by the employment of a Clerk of Vital Statistics. Much interesting literature, pertinent to the Department, has been issued during the year, and the monthly report is the most thorough and exhaustive published by any health department in the United States. Since the inception of the campaign in the interests of Pure Food, the circulation of this report has notably increased ; local and Eastern merchants are constantly making demand; for current and back issues. This report contains in brief the details of all business transacted in the various departments under direction of the Board of Health.

This Board is responsible for the drafting of the following ordinances adopted by the Board of Supervisors and now in force :

An ordinance prohibiting expectoration in street cars and public places.

An ordinance prohibiting the throwing of banana peels and other rubbish on the floors of cars and other public places.

An ordinance prohibiting the spraying of clothes in laundries by means of water emitted from the mouth.

An ordinance requiring supplies intended for public institutions to pass through Food Stations for inspection.

An ordinance requiring the reporting by physicians of cases of tuberculosis, typhoid fever and measles, in addition to other contagious and infectious diseases.

Several of these ordinances have penalties for violations thereof attached, and in all cases where arrests have been made the ordinances have been sustained by decision of the courts.

The recent regulation of the Board uniforming the Inspectors of the Department, and the officers and employees in the public institutions, has redounded to the improvement in the personnel as well as to the promoting of discipline.

The sanitary condition of Chinatown and the Latin Quarter has been closely followed and markedly improved, although buildings which have been ordered destroyed have been permitted to stand by reason of injunctions served upon the Board. In a number of cases the owners themselves have caused their destruction and have replaced them by new structures. The plumbing throughout this portion of the city has been, to a great extent, remodeled and renewed, and without hesitation we claim the sanitation of these particular sections to be better than at any time for years past.

In order to devise plans for the improvement of the municipal sewer system, conferences have been held with Professor George Davidson, Mr. C. E. Grunsky and Col. Mendell, and the subject thoroughly discussed in its various phases, but owing to the fact that Boards of Supervisors are strongly inclined to consider innovations in the matter of civic improvement as extravagances, we have not attempted as yet to carry out this project.

Conferences have also been held relative to the matter of Pure Food with prominent commercial bodies of this city, namely: The Manufacturers and Producers' Association, the Merchants' Association, and the Retail Grocers' Association, to all of which associations the Board is indebted for sympathy and support. Delegates have been sent from the Board to the Council of Associated Industries, an organization having for its object the improvement of the quality of commercial exports and imports of this State. At the Pure Food Congress recently held in this city, representatives from this Board were present. Papers were read and addresses delivered by several of the members and officers of this Department. At this Congress resolutions were adopted recommending the action of the Board in pursuing the vital issues involved in the warfare against adulterated and impure foods.

Consultations have been frequent between this Board and the Master Plumbers' Association, where subjects of mutual interest have been discussed. To this association the Board expresses its thanks for much valuable information concerning the subject of sanitary plumbing, and many suggestions have been received from this source which have been of appreciable benefit to the Department.

The prominent dairymen of this City and County have met at intervals with the members of this Board for the purpose of conferring in relation to the milk ordinances and the application of the tuberculin tests. The Board, however, has never found sufficient reason to alter or abridge its intentions in the enforcement of the ordinance regulating the milk supply, notwithstanding numerous protests and suggestions from interested dealers.

The Butchers' Board of Trade has also consulted the Board of Health on important matters, notably in regard to certain measures introduced in the last session of the Legislature. The arguments of this association in opposition to these measures were presented at great length, and the Board was thoroughly convinced that any steps it might take toward the regulation of the meat supply would meet with bitter and determined antagonism on the part of the Butchers' Board of Trade.

At the last session of the State Legislature the Board of Health was instrumental in recommending and endorsing bills introduced for the purpose of granting additional powers to Boards of Health: one providing for the establishment of ordinances by Boards of Health in matters relating to sanitation, such ordinances to have the same weight and authority as those adopted by Boards of Supervisors; another empowering Boards of Health to issue subpoenas for witnesses in all inquiries relating to public health and sanitation. These measures were introduced by Senator Wolfe, of San Francisco, who, within a few days after their introduction, subsequently withdrew both bills from the Senate file, giving as a reason for his action that the opposition to these bills by certain of his constituents was so strong that had he maintained the paternity of them his political future would have been jeopardized. The same bills were simultaneously introduced in the Assembly by Assemblyman Dibble, who fearing neither the enmity of the Butchers' Board of Trade nor its influence on his political future, stoutly advocated, both in committee and on the floor of the House, the passage of both measures.

These bills were strenuously assailed by a powerful lobby led by the Butchers' Board of Trade of San Francisco, which body circulated false and mendacious reports concerning the attitude of the San Francisco Board of Health in desiring their passage. It was stated that they were introduced solely for the purpose of giving the Board of Health of this city an opportunity to interfere with the business of wholesale and retail meat dealers, the ulterior idea being the extortion of money from these people in order that they might avoid an implied persecution. The Butchers' Board of Trade of San Francisco sent a representative to Sacramento from this city in the person of a certain attorney named Martin Stevens, who appeared before the Senate Judiciary Committee and stated to its members that the San Francisco Board of Health had originated and engineered these bills for the sole purpose of levying financial tribute upon his clients, and of further increasing the patronage of the Health Department. The insolent demeanor and insulting language used by this individual in advocating his cause, together with the absolute falsity of the charges made by him, gave such offense to the members of the Senate Committee that he was called to order and denied the privilege of the floor, being at the same time severely reprimanded by the chairman and several of the Senators then present.

It is a matter of regret that both the above-mentioned bills failed of passage; the one being declared unconstitutional by the Senate Judiciary Committee, and the other slaughtered by the emissaries of the Butchers' Board of Trade of San Francisco.

To Senator L. J. Dwyer, of San Francisco, the Board of Health expresses its gratitude for the valuable services rendered by him in introducing Senate Bill No. 60, authorizing the Board of Supervisors of this City and County to levy a special tax for the purpose of erecting a new municipal hospital. The needs of the city in this particular matter were thoroughly understood by

Senator Dwyer, and his able advocacy of this measure resulted in its passage by a large majority of both Houses of the Legislature.

With regard to the mortality tables for the past year, the Board invites your attention to several interesting facts. The total increase in the number of deaths over the fiscal year 1895-96 is 184. Notwithstanding this increase, the number of deaths resulting from pulmonary tuberculosis has been considerably reduced, there having been during the fiscal year 1895-96 1,003 deaths from this disease, while during the last year only 896 deaths from this cause are recorded. This shows a decrease of 107, which may be attributed to the following preventive measures: The improved condition of dairy herds in this and neighboring counties; the inspection of herds for tuberculosis; the inspection of all milk at the different Food Stations; the inspection of meat in slaughter houses and butcher shops, and the improved sanitary condition of private residences, together with the gradual awakening of the public to the knowledge of the danger always present from association with tubercular patients.

The records of the Health Office show that during the fiscal year of 1895-96, 101 deaths occurred from typhoid fever, and that during the past fiscal year only 75 deaths from this disease were recorded, showing a decrease of 26 deaths. The cause for this reduction may be credited to the rigorous inspection of plumbing throughout the city and the carrying out of the house-to-house inspection by officers of the police force acting as Health Inspectors. It may be noted that 34 deaths out of the entire number caused by typhoid fever were reported from the different hospitals of the city, and may practically be classed as transient cases, many of them having arrived in San Francisco from interior points but a few days prior to death and already suffering from the disease.

The prevalence of an epidemic of diphtheria during the latter part of the year 1896, will account for the heavy increase in the number of deaths resulting from this disease. Owing to the vigorous action of the Health Officer and the Inspectors in tracing out the causes of the spread of the disease in those parts of the city in which it particularly flourished, and the subsequent arbitrary but justifiable action of the Board in insisting upon the placing of modern plumbing in many of the public and private schools in the thickly populated sections, mortality was steadily decreased in the infected districts. Since the establishment of the bacteriological laboratory it has been shown that many cases reported as diphtheria by physicians of the city were not such in reality, but were various forms of diseases of the throat resembling it in appearance. Circulars of warning and of explanation, relative to diphtheria, were prepared by the Bacteriologist and issued by the Department at intervals during the year.

It will be well at this point to mention briefly the attempt of the U. S. Marine Hospital Service, under the guise of Federal supremacy, to prevent the Health Department from obtaining information concerning the prevalence of contagious and infectious diseases in foreign ports. This Service

has made every effort to induce shipping firms and shipping masters to violate the laws of the State providing for quarantine inspection and the payment of quarantine fees, and has furthermore promised all such as obey its suggestions, immunity from punishment by the State authorities. Protests have been sent by this Board to the Treasury Department, citing instances of unwarranted aggression on the part of the officers of the Marine Hospital Service, but have never been accorded the courtesy of reply. Under order of the Board, arrests of offending parties have been made and the Courts will be called upon to pass upon the right of San Francisco to maintain its quarantine service.

The Receiving Hospital, during the early part of the year, was greatly crippled by lack of surgical instruments. These instruments have been provided for by a special appropriation by the Board of Supervisors, but the parties to whom the contract for these supplies had been awarded showed no disposition to furnish them. The Board of Health thereupon passed a resolution ordering the Receiving Hospital closed until the equipment of instruments had been provided. Within a few hours after the passage of the resolution, the required articles were delivered at the Hospital.

The detention of insane patients in the indescribably filthy apartments adjacent to the Receiving Hospital, in the basement of the New City Hall, has merited and received the condemnation of this Board, and we are pleased to report that by the combined efforts of Sheriff Whelan and the members of this Board, the City Hall Commissioners have been persuaded to provide more commodious and better ventilated quarters for the reception of these cases in another part of the building, where their comfort and safety will be assured.

Up to the past year, San Francisco has had no facilities for the treatment of emergency cases other than those afforded by the City Receiving Hospital at the New City Hall, to which Hospital the injured were conveyed mainly in Police Patrol wagons and in ordinary vehicles, as the one ambulance attached to the Hospital was insufficient for the service required in responding to the numerous calls from different portions of the city.

Recognizing the inefficiency of this branch of the Department, and the necessity of providing more adequate means for transportation and treatment of cases requiring immediate aid, two Branch Receiving Hospitals have been established, at each of which an assistant Police Surgeon is on duty day and night. Two modern ambulances, representing the most improved type of this class of vehicles, have been constructed from designs selected by this Board after careful consideration. To each station an ambulance has been assigned and is held in readiness for calls at any hour. One of the ambulance stations is located in Golden Gate Park, in a building provided by the Park Commissioners without expense to the city; the other station has been placed on the water front, near the ferries. The building in which it is situated was constructed by the Board of State

Harbor Commissioners according to plans submitted to and approved by this Board and also without expense to the city.

Both of these stations have been equipped with the appliances necessary for the handling of cases, both medical and surgical, and the reports of the surgeons in charge fully justify the statement that since the establishment of these Branch Hospitals many lives, which under the old system of conveyance to the Central Hospital, would have been sacrificed during transit, have been saved by the proximity of the ambulance stations to the scenes of accident and the brief time consumed in procuring the necessary assistance.

While much might be said in this report in relation to the present City and County Hospital, and the pressing needs for a new institution, reference to the report of the Superintendent Physician of the Hospital will elicit sufficient information to show that the claims of the Board in this respect are well founded.

The City and County Alms House and its administration continue to be a source of satisfaction to the Health Department, and the Superintendent is deserving of compliment for the excellence of the work accomplished by him since his accession to office.

In conclusion, it is well to remark that in this report much detail has of necessity been omitted, but we believe that enough has been set forth to demonstrate that the course of this Department has been progressive, and that its policy has been one of activity directed toward improving the sanitary condition of the City of San Francisco and of protecting the health of its inhabitants.

Respectfully,

G. J. FITZGIBBON, M. D.,

H. H. HART, M. D.,

J. F. MORSE, M. D.,

J. M. WILLIAMSON, M. D.

HEALTH OFFICER'S REPORT.

SAN FRANCISCO, July 1, 1897.

To the Honorable the Board of Supervisors

Of the City and County of San Francisco—

GENTLEMEN: I beg to submit to your Honorable Body my report for the fiscal year ending June 30, 1897.

In briefly reviewing the work of the past year, I shall respectfully call your attention to some of the valuable results achieved.

In my last annual report I referred to the importance of reform in sanitary matters, and a general revision of some of the old methods which had so long prevailed, and the introduction of some of the new methods which conform with the requirements of modern sanitary science.

Much has been accomplished in this direction, and in addition to it the Board of Health has assumed the tremendous work of preventing the sale of adulterated foods. No organized system for this purpose has ever been put in practice before, and it became necessary to establish and organize an entirely new department, which has been designated the Food Department. Four stations were selected situated at City Front, Army and Alabama, Geary and Central avenue, and Fourth near Berry streets, and eight new Inspectors appointed to man them. These stations are kept open day and night and all dealers in milk are required to pass through them, their milk being examined before entering the city. Any found to be impure or adulterated, is confiscated and destroyed. For a more complete review of the work of this department I respectfully refer you to the report of the officers in charge of the same.

In the Plumbing Department new rules have been established and successfully carried out. This department is under the management of Chief Plumbing Inspector J. J. Sullivan, who, finding under the new rules, the number of his assistants were inadequate to perform the work, two additional plumbing inspectors were appointed, making four instead of two. All the defective plumbing is now referred to this department.

The duties of Health Inspectors consist in the inspection and abatement of such nuisances as are dangerous to life and health, and that a more effective and thorough inspection should be attained, two additional inspectors were appointed during the past year, making eight instead of six. The city is divided into eight districts and an inspector is detailed for each, compelled to make a thorough inspection of his district, and to report daily at the

office the work he has done, which is recorded by the secretary in books specially printed for the purpose. In this manner a most thorough and complete service is obtained.

The establishment of two properly equipped Emergency Hospitals has greatly added to the efficiency of the Receiving Hospital Department.

A Bacteriological Department, most ably presided over by Dr. John C. Spencer, and a Chemical Laboratory under the supervision of Prof. W. T. Wenzell, are innovations which have been introduced since my last report.

During the months of September and October, 1896, a number of buildings and shanties in Chinatown were condemned and torn down by order of the Board of Health. This work was continued until I was restrained by owners serving injunctions against the Board of Health as well as myself. These cases are as yet unsettled, no decision having been arrived at by the courts. Nevertheless much good was accomplished by the destruction of the many filthy, reeking, useless houses, as well as compelling property owners to repair a large number of others, many of which were in a most frightful sanitary condition, and put them in proper shape by entirely renovating the plumbing. Work in this direction was undoubtedly expedited by the fear of owners of such miserable structures that their property would be condemned and destroyed by order of the Board of Health. In my estimation this work should be again resumed and continued until the many rickety, tumble-down, uninhabitable houses still standing in San Francisco are entirely destroyed, and I also believe that the litigation brought about by endeavoring to enforce this very important sanitary measure should be urged to a speedy settlement, so that the rights of the Board of Health may be absolutely determined beyond peradventure of question.

The market inspection is under the management of Chief Inspector Ben Davis, assisted by three deputies. The Chief Inspector's duties consist in the general supervision of the entire service extending over the city. One assistant is located at Butchertown, and it is his duty to see that no diseased meat shall enter the market. Another is stationed at the City Front to guard against the entrance of impure food, or diseased animals. The other inspector covers the entire city and looks to the sanitary condition of the markets and meats. These services, as suggested by the Chief Market Inspector in his report, are utterly inadequate to fulfill the requirements entailed by the ordinances of your Honorable Body in regard to the supervision of meat supplies being slaughtered for and sold in the City and County of San Francisco.

Respectfully submitted,

A. S. LOVELACE, M. D.,

Health Officer.

INDEX OF MORTALITY TABLES AND DEPARTMENT REPORTS ACCOMPANYING HEALTH OFFICER'S REPORT.

TABLE NO.

—	Alphabetical list of the causes of death.....	19-20
1.	Mortality and distribution for 25 years.....	21
2.	Mortality and distribution for 25 years arranged in classes.....	22
3.	Estimated population, deaths and death-rate for 25 years.....	23
4.	Report of deaths registered in San Francisco during fiscal year.....	24-39
	Report of deaths registered in San Francisco during first half of fiscal year.....	40-55
	Report of deaths registered in San Francisco during last half of fiscal year.....	56-71
	Report of deaths registered in San Francisco by months during fiscal year.....	74-143
5.	Calendar year report of mortality for 1896.....	144-146
6.	Mortality in San Francisco for 25 years (Mongolian) classified.....	147
7.	Estimated population, deaths and death-rate (Mongolian).....	148
8.	Ages of decedents in the different months of fiscal year.....	149
9.	Localities of deaths in different months of fiscal year.....	150
10.	Sex, race and nativity of decedents.....	151
11.	Nativity of decedents, classified.....	152-155
12.	Monthly distribution of deaths from zymotic diseases.....	156
13.	Twenty of the principal causes of death.....	157
14.	Diagram showing the principal causes of death.....	158
15.	Monthly distribution of deaths for fiscal year.....	159-160
16.	Comparative table showing deaths from diphtheria, scarlatina and typhoid fever for five years.....	160-161
17.	Comparative statement of mortality from phthisis pulmonalis for 3 years, monthly, and for 30 years, yearly.....	162-163
18.	Comparative statement of deaths from preventable diseases for 10 years.....	164-165
19.	Comparative statement showing all causes of deaths of children under 10 years and rate per thousand, for 7 years.....	166
20.	Social condition of decedents.....	167
21.	Statement of free vaccinations.....	167
22.	Births, marriages, and deaths for 25 years.....	168
23.	Report of births for fiscal year, classified monthly.....	169
24.	Statement of marriages, births and deaths, arranged monthly, for 5 years.....	170-171
25.	Comparative statement showing number of births filed for 8 years.....	172
26.	Interments for fiscal year (cemeteries).....	173
27.	Disinterment permits issued during fiscal year.....	174
28.	Disinterment account, receipts and expenses.....	175
29.	Weather Bureau report.....	176-177

No. of inspections made in the Latin Quarter.....	342
No. of abatements made in the Latin Quarter.....	80

JOHN J. SULLIVAN,

Plumbing Inspector.

REMARKS OF PLUMBING INSPECTOR.

San Francisco, July 1, 1897.

To the Honorable the Board of Health—

Gentlemen: In connection with my annual report I beg leave to submit an outline of the results of the special work ordered by your Honorable Body to be done in the Chinese and Latin quarters of the city. This special work has been in progress for ten months. It has demanded a daily and persistent attention from the Plumbing Department, as many of those owning and controlling property in these districts have been slow to obey the directions of the Board where they have not actually resisted them.

When the work began there were few habitations in the Chinese and Latin districts that were not a menace to public health. The sanitary arrangements in a great majority of the buildings were of the worst possible character. The plumbing was primitive and offensively inadequate. Apartments used for sleeping and working were foul with noxious odors and the accumulation of filth. Structures built in violation of law and dangerous to the inmates had been erected as insecure additions to overcrowded buildings. Unclean disease breeding basements, saturated and littered with refuse, were the sleeping rooms of hundreds of Chinese. Above and below ground, in rookeries and cellars the Chinese quarter threatened the health of its inhabitants when your Honorable Body directed that the special house to house inspection be commenced. While this work is not yet finished and will not be for many months, if the orders of your Honorable Body are to be carried out as you have outlined them, enough has already been accomplished to place Chinatown in a far more sanitary condition than it ever was before in its history.

In most of the buildings an entire change has been made in the sanitary system. Decayed and inadequate plumbing has given place to modern appointments. Rookeries and sheds attached to buildings have been torn down. Unhealthy basements have been cleaned and closed and their inmates forced to seek abodes above ground. The interior and exterior of buildings have been painted and renovated, in many instances the change necessitating a complete remodeling of the interior of structures.

In detail the work that has already been done by the Plumbing Department under the direction of your Honorable Board includes new plumbing, painting, whitening, cleaning, ventilating, renovating and partial remodeling in the houses on the following streets:

Commercial, on both sides, from Kearny to Dupont.
 Sacramento, on both sides, from Kearny to Stockton.
 Clay, on both sides, from Kearny to Powell.
 Washington, on both sides, from Kearny to Powell.
 Jackson, on both sides, from Kearny to Powell.
 Pacific, on both sides, from Kearny to Powell.
 Dupont, on both sides, from California to Broadway.
 Stockton, on both sides, from California to Broadway.
 Waverly Place, on both sides, from Sacramento to Washington.
 Spofford alley, on both sides, from Washington to Jackson.
 Ross alley, on both sides, from Washington to Jackson.
 St. Louis, on both sides, off Jackson, north of Dupont.
 Prospect place, on both sides, from California to Clay.
 Selma place, on both sides, off California, east of Stockton.
 Clay alley, on both sides, off Clay, west of Stockton.
 Bartlett alley, on both sides, from Pacific to Jackson.
 Stouts alley, on both sides, north of Washington, east of Stockton.

Sullivan alley, west side, from Pacific to Jackson.

Washington alley, east side, from Washington to Jackson.

Brooklyn alley, on both sides, south of Sacramento, east of Stockton.

Trenton street, on both sides, from Washington to Pacific.

Honeton terrace, west side, from west of Stockton, south of Jackson.

This is but one portion of the work performed by the Plumbing Department. In the district south of Market there have been a great many buildings inspected. These buildings are principally occupied by poor people, but many of them are owned by wealthy landlords. The plumbing and drainage in all these buildings was a menace to health, no attention whatever having been paid to their sanitary condition. In many cases this has been changed. On both sides of Clara street, from Fourth to Sixth, the plumbing and drainage has been altered so as to put the different premises in a healthy condition.

When we commenced our work on Clara street diphtheria and scarlet fever were raging in an epidemic form. As soon as the places were cleaned and the plumbing and drainage put in good order the health of the district was decidedly improved. In other parts of this district the same work has been done. In fact, there is no part of the city that our attention has been called to that has not been improved, as far as the health of the people is concerned, by making the change ordered by the Plumbing Inspectors.

In performing the duties referred to in my report I have been ably assisted by the Assistant Plumbing Inspectors, Mr. McGrath, Mr. Ward, Mr. Kelly and Mr. Connolly, all of whom have worked faithfully and honestly, and let me say right here, without fear of contradiction, that there is no private business or corporation in the city where the employees are more attentive to business than we are. Our hours are as long or longer than any other offices in the Hall. Our duties in many cases compel us to work nights and Sundays to keep up with our work. In fact, gentlemen, there are not a sufficient number of Inspectors to properly do the work that we are called on to perform. There are new building inspections, alterations in old buildings, changing or altering plumbing in old houses, nuisances consisting of defective plumbing referred to our department from the Health Inspectors, complaints coming direct to our department, side sewers from the curb to building, including the traps, and in many cases we have been called on to inspect houses which people are desirous of renting or buying. In attending to the above duties it requires much time and many visits. We also in a great many cases call on the owners to explain to them the necessity of doing the work ordered, which takes up considerable of our time.

We have not made many arrests. We think that persuasion is better and takes up less time than it would if we made arrests.

Respectfully submitted,

JOHN J. SULLIVAN,
Plumbing Inspector.

NOTE—For List of Master Plumbers, see Appendix.

CHIEF MARKET INSPECTOR'S REPORT.

San Francisco, July 1, 1897.

To the Honorable the Board of Health—

Gentlemen: I respectfully present my annual report as Chief Market Inspector, embracing the work accomplished during the fiscal year and giving a detailed statement of the condemnations made by the Assistant Market Inspectors and myself.

I must again call the attention of your Honorable Board to the urgent need of a proper supervision and inspection of the slaughter-houses in Butchertown, and the passage of an ordinance, regulating the hours of killing in that vicinity. Since the withdrawal, by the United States Government, of the inspection over almost all of these slaughter-houses, the supervision of the places has entirely devolved upon but one Assistant Market Inspector, thus not only preventing the necessary thorough inspection, but at the same time giving slaughtering establishments an opportunity to kill cattle unfit for food after the regular hours of the single Inspector located in that district.

Consequently, it becomes necessary on account of the withdrawal of Government Inspectors to increase the present small force of Market Inspectors and to provide for a constant and vigorous inspection of slaughter-houses. The passage of an ordinance prohibiting the killing of cattle between sunset and sunrise would enable the department to successfully inspect all carcasses intended for human consumption, while at the same time it would effectually prevent the bringing of diseased or tainted meats in to the city proper.

There are at present ten beef, eight sheep and nine hog slaughter-houses in Butchertown, but two of which are under Government inspection. The remainder are looked after by but one Assistant Market Inspector.

Aside from Butchertown there are four hundred markets scattered over the city which are under the supervision of but two men, thus showing the impossibility, with the present force, to give a thorough inspection to all as I deem absolutely necessary. These markets should, by future local legislation, be compelled to secure permits from the Board of Health the same as an ordinance compels milk vendors to do. Such an ordinance would give additional prestige to the department that it sadly lacks at present, while the fear of a revocation of said permit for any violation of the law would prevent much from being sold that is meat in name only.

I would again suggest that markets be prohibited from exhibiting meats in front of their establishments. The dust from the streets, impregnated with disease germs and filth, speedily transforms healthy beef into meat that is absolutely a menace to health. Meats intended for sale should be kept away from all danger of attracting contagious diseases or such forms of bacteria possessing a tendency to cause sickness.

During the year I have made twelve arrests for violation of the meat ordinances, of which eleven were convicted and one acquitted. A total of \$285 was paid into the City Treasury for fines on said convictions. One dealer in diseased meats was sentenced to six months in the County Jail, and was lately released after having served his time in full. This is the first instance in the history of my department that the full extent of the law was given an offender.

For the convenience of the public and trade in general, I have appended this year, in addition to my former tables, a complete alphabetical list of all markets in this city and county. I am also preparing for your Honorable Board a series of maps upon which are being placed the location of all markets in this county. Each market has been given an official number to designate it in future inspections.

All of which is respectfully submitted.

BEN DAVIS,
Chief Market Inspector.

NOTE—For List of Markets, see Appendix.

REPORT OF ASSISTANT MARKET INSPECTORS.

SAN FRANCISCO, July 1, 1897.

To the Honorable the Board of Health —

GENTLEMEN: I beg leave to submit the following report of all seizures made by the Market Inspectors for the fiscal year ending June 30, 1897:

SEIZURES.	Total.	1896.						1897.

Number of fumigations.....	18

Respectfully,

F. E. BENJAMIN,
Health Inspector, District No. 8.

* District No. 8 was created October 1, 1896.

REPORT OF BATH AND LAUNDRY INSPECTOR.

San Francisco, July 1, 1897.

To the Honorable the Board of Health—

Gentlemen: As Bath and Laundry Inspector, I respectfully submit the following report (from November, 1896, to June 30, 1897), covering the inspection of the various white and Chinese laundries in the City and County of San Francisco:

There are located in this city some six hundred laundries, of which two hundred are white and the remaining four hundred Chinese.

The white laundries (American and French) have displayed a commendable spirit of enterprise in their active co-operation with this branch of the Health Department by their willingness to observe such rules and regulations now in force applying to the sanitation of laundries and the condition of the occupants.

Upon the other hand, the Chinese laundrymen, owing to their ignorance of our laws and their unwillingness to remedy the many vicious evils resulting from a lack of inspection on the part of former city officials, displayed a tendency during my first inspections to oppose any and all sanitary improvements in their establishments. The prompt withdrawal of their laundry permits, aided by a vigorous enforcement of State and local ordinances, have taught them that the time of old conditions and open violations of the laws are things of the past. Since then this class of laundries has steadily improved, both in the cleanliness of the occupants and the sanitation of the laundries. The work has been slow but somewhat effective, as I found on later inspections that the tendency to return to old conditions was still active in the minds of the proprietors of these laundries. This fault, however, will undoubtedly be remedied in the course of time, with the result that the Chinese laundries will occupy a higher standard among like enterprises in this city.

As in other newly created departments of the Health Department, new ordinances of the Board of Supervisors granting additional powers to your Honorable Board in the inspection and supervision of laundries are earnestly recommended. In this connection I have taken the liberty to suggest such ordinances for passage as are deemed necessary for the welfare of the city and the good of the department:

First—Limiting the number of occupants in laundries according to the condition, space, etc

Second—Enforcement of good ventilation and pure air.

Third—Prohibiting occupants sleeping under ironing tables upon the clothes of patrons.

Fourth—Permitting laundries in brick buildings only.

Fifth—Prohibiting walls to be papered, and allowing paint or whitewashing only.

Sixth—Prohibiting the smoking of opium in laundries.

Regarding the number of laborers permitted to work in laundries, it is absolutely necessary that some limitation be placed upon the number of occupants. Many of these Chinese laundries are decidedly overcrowded with help, who, aided by the lack of ventilation and uncleanly habits, are liable to generate and spread disease in the clothes of their patrons.

Good ventilation and a generous supply of pure air to penetrate in all corners of each establishment is greatly desired. The atmosphere in some of the laundries is simply disgusting, while the odors arising therefrom give warning of what is liable to happen if measures are not taken in the near future to enforce an order requiring a free circulation of air to all parts of these buildings by means either of additional windows or such other methods better suited to same.

Formerly (prior to November, 1896, and to a small extent now) the occupants of Chinese laundries were accustomed to sleeping upon the clothes of their patrons under the ironing tables. Since the inspection of laundries began I have refused to grant permits to proprietors of laundries who persist in permitting their help to continue this vicious practice. I have also ordered all curtains hanging before the ironing tables to be removed so as to allow of a free circulation of air.

It is necessary that white and Chinese laundries be entirely confined to brick buildings. In such structures the liability of the establishment to catch fire is reduced to a minimum; the tendency to generate disease is reduced in like proportion, while other nuisances always cropping to the surface in frame buildings to annoy near-by tenants will naturally be of less frequent occurrence.

The papering of walls in laundries is one of the most dangerous practices that has come under my observation. Prior to the inspection and subsequent condemnation of wall paper, this article was used in fully three-fourths of the Chinese laundries. Much of it was in an old, torn and dilapidated condition from age and filthy with the odors from numerous washings. While this practice has almost been entirely done away with, still legislation is necessary to prevent a recurrence.

Opium smoking in laundries by white inmates exists to an alarming extent. Males and females, white, old and young, indulge in this vice. Laundries so frequented should be quarantined against taking in washing and the proprietors thereof severely punished. Clothing impregnated with opium fumes and laid upon by "fiends" is certainly not of a healthy nature to the persons using them thereafter. These opium dens in Chinese laundries also entrap innocent youths and girls and reduce them to the condition of beasts.

An ordinance introduced by the Chairman of the Bath and Laundry Committee, Dr. H. H. Hart, prohibiting the spraying of clothes by means of water emitted from the mouths of the occupants, is being vigorously enforced with decided effect.

The passage of this ordinance has resulted in the adoption by the Chinese of a can with spray and bulb attachment, thus considerably lessening the liability to spread disease, while at the same time discontinuing a filthy practice.

I have arrested some fifty Chinese for violation of this order, and secured convictions in every case of five dollars or twenty-four hours' imprisonment.

I have added to this, my first annual report, a complete list of white and Chinese laundries in this city and county which have been under inspection. Owing to the frequent change of proprietors the list has been arranged according to location, by streets, for easy reference.

All of which is respectfully submitted.

WM. H. TOBIN,

Chief Bath and Laundry Inspector.

NOTE—For List of Laundries, see Appendix.

HEALTH OFFICER'S REPORT.

SUMMARY OF LAUNDRY AND BATH-HOUSE INSPECTIONS.

MONTH.	Totals.	LAUNDRIES.	
		Good Condition.	Poor Condition.
December.....	59	7	52
January.....	56	1	55
February.....	62	4	58
March.....	61	3	58
April.....	217	4	213
May.....	173	39	134
June.....	83	36	47
	711	94	617

Of the 617 white and Chinese laundries found in poor condition, fully twenty-five per cent have restored their establishments to a fair sanitary condition. The balance have been served with notices to abate, and many are now endeavoring to comply with the orders given.

Fifty-one Chinese were arrested, and their conviction secured, for violation of the ordinance prohibiting the spraying of clothes by means of water emitted from the mouth.

Four Chinese laundrymen were arrested for refusal to abate nuisances when so ordered.

Ten Chinese laundries were condemned and ordered closed by the revocation of their permits. Of this number one was torn down by the owner and a modern business structure is now being erected.

Sixteen bath-houses were inspected and all found in good condition.

REPORT OF BAKERY INSPECTOR.

San Francisco, July 1, 1897.

To the Honorable the Board of Health—

Gentlemen: I have the honor to submit the following report for the fiscal year ending June 30, 1897:

Total number of bakeries under inspection.....	262
Number of inspections from October 1, 1896, to July 1, 1897.....	604
Number of nuisances abated.....	153
Number of nuisances referred to Plumbing Department.....	8
Number of nuisances unabated.....	9

It gives me pleasure to state that good results have been obtained, considering the short space of time, nine months, since the creation of this department and my appointment as Bakery Inspector.

The work already accomplished by your Honorable Board in this branch of the service is certainly worthy of the earnest consideration of every one interested in clearly baked bread and sanitary bake-shops.

One great impediment I find in the performance of my duties, is the deplorable lack of local ordinances governing the condition of bake-shops; failure by direct legislation to give the Board additional powers in the superintendence of their working, and also to the cleanliness of the occupants.

In spite of these defects some effective work relative to the placing of all bakeries in a sanitary condition has been accomplished. I have visited, from time to time, and at different hours of the day and night, many bake-shops. In cases where the plumbing was not in a sanitary condition, according to the rules of your Honorable Body. I have compelled them to place the same in a proper sanitary condition. In cases where the floors exhibited signs of dampness, new cement floors were demanded. Proper ventilation was at all times required and insisted upon. In many instances it was necessary to order whitewashing to better the sanitation of the bake-room proper.

I have visited and located two hundred and fifty-seven bakeries, all of which I have placed in an alphabetical list arranged according to the names of proprietors, which list is intended for easy reference by your Honorable Board, and for that part, for the general public interested in the welfare of this branch of the service.

I would respectfully request that ways and means be devised whereby the efficiency of this department may be increased, either by passage of health regulations or by ordinances submitted to the Board of Supervisors. It is necessary in these ordinances to pay particular attention to the cleanliness of the occupants; sanitary condition of the bake-shops (ventilation, ovens, floors), and to the material used in the baking of bread. Under ordinances such as these it would be possible for me to accomplish my duties quicker and in a much more effective manner.

All of which is respectfully submitted.

J. W. CAMERON,
Bakery Inspector.

NOTE—For List of Bakeries, see Appendix.

DISINTERMENT INSPECTORS' REPORT.

SAN FRANCISCO, July 1, 1897.

To the Honorable Board of Health

Of the City and County of San Francisco—

GENTLEMEN: We respectfully submit our report of disinterments and removals for the fiscal year 1896-97:

Total number of permits issued during year.....	486
Disinterments for fiscal year 1896-97.....	485
Disinterment permits canceled fiscal year 1896-97.....	1

Respectfully,

A. K. HAPERSBERGER, M. D.,

RICHARD M. JONES,

Disinterment Inspectors.

REPORT OF BUREAU OF FOOD INSPECTION.

San Francisco, July 1, 1897.

*To the Honorable the Board of Health**Of the City and County of San Francisco—*

Gentlemen: I have the honor to submit the following report for the fiscal year ending June 30, 1897:

During the months of July, August, September and October the inspection of milk and dairies proceeded on the same lines as during the preceding year, viz: being carried on as best I could alone. During those four months considerable good was accomplished on account of the many night raids made among the numerous milk dealers. I found, however, that on account of the many severe lessons taught to unscrupulous dealers the adulteration of milk had very materially decreased. Among the many important factors added to the department during the past year was the opening of the four Food Inspection Stations, which event took place on the 11th day of November, 1896. Station No. 1, located on Clay street wharf on account of certain extensions made in the construction of the new ferry building, has not been in operation as desired by the Board of Health. This necessitates the inspection of milk on the different wharves, which is very inconvenient. I cannot say that there will be any change in the method of inspecting milk at the ferry until we can secure more space for our station. The average number of wagons inspected daily at this station is 96; average number gallons of milk inspected daily, 8750. Station No. 2, located at Fourth and Berry streets, is in good condition, and the average number of wagons inspected daily is 53; average number gallons of milk inspected daily, 2,790. Station No. 3, being located on Army and Alabama streets, at which 15,500 gallons of milk and 355 wagons are inspected daily, is the most important of the stations and necessitates considerable labor and care to see that the same is properly managed. Station No. 4 is located on Geary street and Central avenue, and 44 wagons and 1,050 gallons of milk are inspected daily.

Regarding the establishing and operation of the four open Food Inspection Stations, I have to say that no doubt if carried on according to the plans outlined by their originator, J. B. Reinstein, the public of San Francisco would enjoy one of the most complete milk inspection systems in the United States. Dealers will hardly risk bringing for inspection impure milk to the stations when they are made aware of the fact that it might cost them the revocation of their permit, for, according to the decision of his Honor, Judge Hunt, in the case of Kavanaugh and Gallagher vs. the Board of Health, the Board has the power to revoke the permit of any milk dealer who fails to comply with the rules and regulations of the Health Department. Numerous complaints have been made that many of the milkmen on receipt of their inspection certificates after having had their milk inspected at the stations, resorted to their old tricks and watered their milk. Regarding this I desire to say that for many months I have had two deputies collecting samples throughout the city from restaurants, hotels, milk depots, milk wagons, and in fact wherever milk was on sale, and the records will show how groundless have been the complaints. At the present time and for the past three months this Bureau has been handicapped from the fact that the deputies who were in charge of

gathering samples as above stated are now engaged in the more important work of assisting veterinary I. W. O'Rourke inspecting dairy herds and administering the tuberculin test in order that all cows afflicted with tuberculosis shall be exterminated. It is needless for me at this time to call the attention of your Honorable Body to the great number of tuberculous cows there are among the various herds situated on the different dairies which supply milk to this community, and as this subject has for the past two years been a source of deep concern to you all, I am pleased to say that the inspection is progressing uninterruptedly and in good shape, and if no obstacles are encountered during this term our dairies will have few unhealthy cows in their herds. There being many other important matters which it is my desire to call to your attention, I will respectfully refer you to the report of Veterinary Surgeon O'Rourke concerning the above, which will be found of much interest.

ESTABLISHING THE BUREAU OF FOOD INSPECTION.

The Board of Health, realizing the great importance and necessity of a thorough inspection of all kinds of food, devoted considerable of their valuable time in gathering data from all the large Eastern States and cities where the inspection of food is carried on, and after many consultations, at which all matters appertaining to the inspection of food were most thoroughly discussed, the Board concluded to take the matter up, organize and establish a Bureau of Food Inspection which would be a department not in name but in fact. The Bureau was organized last January and is without doubt one of the most important and beneficial movements yet inaugurated in the interest and welfare of the community. The work already accomplished through this branch of the Health Department, although in operation but a few months, is indeed very creditable, as the statistical report will show. To the great precautions taken by the Board in interesting the Courts and explaining the necessity of prosecuting all offenders without fear or favor to any one is largely due the success with which we have met, for during the month of February a conference was held between the four Police Judges, representatives of the Manufacturers' and Producers' Association and the council of Associated Industries, his Honor, Mayor Phelan, the chief of Food Inspection, and representatives of the Health Department. After a very lengthy discussion, and when to all appearances it seemed as though the result of the conference would be anything but satisfactory, his Honor, Judge Campbell, arose and fearlessly announced that he was willing that all impure food cases should be assigned to his department and he would administer the law justly. How beneficial the result of the conference has been will be seen by the fact that of 33 arrests we have 13 convictions, 20 still pending, and 5 dismissals. In 2 cases the jury failed to agree, standing in one case 10 for conviction and 2 for dismissal; in the other, 11 for conviction and 1 for dismissal. Much of the success with which we have thus far met is largely due to the ceaseless and untiring efforts of Assistant District Attorney Jos. J. Dunn, who, through the kind interest and courtesy of District Attorney Barnes has, associated with Prosecuting Attorney Spinetti, conducted the prosecution thus far in all cases of dealers in adulterated food. Obeying the initiatory orders of the Board of Health to procure Eastern goods in any of the lines attached, the purpose was to drive that class of competition from our midst first rather than antagonize our own producers and to protect the latter as far as possible under the law. This has been done as far as it was possible, notably in catsup and condensed milk cases; but when it came to honey and jellies it was found that the bulk of adulteration was perpetrated by our own people and the department had no other course to pursue than to include them in orders and bring them to a realizing sense that they were breaking the law without valid excuse. It seems strange that within a State such as ours, reputed to be the most extensive fruit-growing State in the

Union, that the manufacturers should stoop to the adulteration of honeys, jellies, jams and olive oils. It is claimed by some that the adulteration practiced by our people has been forced upon them in order to meet Eastern competition, but after a thorough canvass our inspectors have failed to find the Eastern goods in anything like the amount placed on the market by home manufacturers; hence that argument would seem to be nil. It is true that grossly adulterated jellies of Eastern manufacture have been found in thirty-pound pail packages said to contain currant and raspberry, when, in fact, no trace whatever of the fruit could be found, and that they have been purchased for 90 cents a pail, and in some cases, I am informed that they have been sold for as low as 65 cents per pail. When the cost of the pail is $12\frac{1}{2}$ cents, and the freight from the East is deducted from the prices stated, it would seem that a novice would require little discernment to determine that such food is absolutely unfit to be consumed by a human being. It is needless to say that in all cases of this kind arrests have been made and convictions obtained. Of jellies in glass or tin, as I said before, the bulk of the adulteration has been found, to our discredit, in goods of home manufacture, and of the few Eastern packages obtained most of them were found pure. This caused the following remark to be made by one of our retail dealers: "We aim to keep nothing on our shelves but absolutely pure goods," and can it be possible that in this great fruit-growing State we shall be obliged to procure commodities from New York or England in order to get that which is within our borders? In the case of honey there is no excuse for the use of 95 per cent of glucose and 5 per cent honey where bees will thrive in almost any season of the year even within the limits of our largest cities. In the establishment of this department your Honorable Body has most certainly undertaken one of the most important, gigantic and far-reaching movements conceivable. In the first place few articles of food to be had in this State at the present time are absolutely pure. When the time shall have arrived to expose to public view the atrocious schemes resorted to, by dealers in all classes of food and drink, to make money by the ruination of the State's credit and the destruction of human life, our people will stand in amazement and wonder why they have been apparently dead to this most important matter for the past twenty years.

Under your direction the crusade against adulterated food shall progress, and with grand results; but in order that the State of California shall occupy the position to which she is justly entitled, viz: The producer of food which shall be the first favorite in the world's markets, and the people, regardless of locality, reap the benefits of your labor, it will be absolutely necessary that a State Bureau of Food Inspection be established.

Regarding the laws against the adulteration of foods, there are plenty of laws in the Statute books of this State, but there has never been a method found to enforce them, nor do the laws themselves provide for the method of enforcement.

To successfully enforce State laws against the adulteration of foods, a central organized State body or State Commission is required. Hence, in order to successfully carry on the work so as to benefit the whole State requires the concentration of efforts into the hands of State officers backed by legal machinery through the Attorney-General's office. The entire work of proceeding against the adulteration of foods of all kinds placed in the hands of such officers should be sustained by the law, making it the duty of the Attorney-General's department and the different District Attorneys to act as the agents of the State in the prosecution of violators of the law. This department has so far maintained the principle that the law will and shall be enforced. In doing this work for the emancipation of this city and State from one of its greatest evils, drastic, arbitrary and determined efforts were and are still absolutely necessary. The most formidable evil that confronts us is food adulteration. It is a menace to every industry of the farm or of the orchard, and I desire to quote the following from the report of the committee in the United States Congress on the question of our financial depression:

"The agricultural depression is still further augmented by food adulteration, which adds millions annually to the farmers' losses. The necessity of State food inspection demonstrates itself from the fact that dealers convicted in San Francisco may have branches in other sections of the State where the same brands condemned by our local Board are offered for sale and where we have no jurisdiction. Such a case was that of Wm. Cline, of 949 Market street, who had a branch in Los Angeles. After conviction here he was obliged to close his business in this city and concentrate his interests in the Los Angeles branch.

The case of the United States vs. Dockery, regarding the shipment of adulterated brandy through the United States Custom House to Europe, is of such recent occurrence that comment is hardly necessary; but suffice it to say that every possible step has been taken so far, and every possible means will be employed, to prevent future shipments of a like nature.

It must not, and cannot be expected that a thoroughly effective system for the protection of our citizens against the nefarious practices of some of our home manufacturers can be accomplished in a day or a year; but with the limited means at their command the Board of Health are certainly to be commended for the work already done. Each month and each day brings a new experience in the course of our duties and this, coupled with the study of reports of States where they have been fighting impure and adulterated food for years, will in the near future place this department of the city government in a position to formulate a system which shall stand not only as a model for our sister States, but shall be as complete and thorough a protection to those within our own borders, so far as home food and consequent health is concerned, as any extant. Hence I would respectfully call your attention to the necessity of my letter of June 24, 1897, which is as follows:

"San Francisco, June 24, 1897.

To the Honorable the Board of Health—

"Gentlemen: Recognizing the importance of the Pure Food movement to this city and State, which has brought this city into prominence throughout the Pacific Coast, I also recognize that the encouragement or crippling of this department rests with the Board of Supervisors of this city, I would refer you to Section 3009 of the Political Code of this State, which permits the Board of Health to appoint such employees as they may deem necessary, and commands the Auditor to audit it, and the Treasurer to pay warrants drawn for such appointees, so that if a deficiency exists it will have to be made up out of the General Fund.

"I have divided my statement into three distinct branches and schedules, and in Schedule "B" I have included an assistant attorney, for without his advice and assistance our work will not be effective. In making up these schedules I have borne in mind that the public health is paramount to all other considerations."

SCHEDULE A.

MILK INSPECTION.	PER ANNUM.	TOTAL.
Station No. 1, Ferry- 2 Inspectors day and night, at \$75 per month. . .	\$1,800 00	
Station No. 2, Fourth and Berry—2 Inspectors day and night, at \$75 per month.....	1,800 00	
Station No. 3, Alabama street—4 Inspectors day and night, at \$75 per month.	3,600 00	
Station No. 4, Geary and Central avenue—2 Inspectors day and night, at \$75 per month.....	1,800 00	
Four outside Inspectors, taking milk samples at random around the city, at \$75 per month.....	3,600 00	\$12,600 00
SUPPLIES AND MAINTENANCE.		
Rent and gas (Stations), at \$75 per month.....	\$900 00	
Printing and Inspectors' books, at \$75 per month.....	900 00	
Stationery, etc, at \$75 per month.....	900 00	
Telephones (four Stations), at \$30 per month.....	360 00	
Printing sundry reports, tally sheets, etc., at \$50 per month.....	600 00	
Sundry expenses, including sulphuric acid, bottles, labels, etc., at \$50 per month.....	600 00	
Transportation (buggies for outside Deputies), at \$50 per month.....	600 00	4,800 00
Total.....		\$17,400 00

SCHEDULE B.

DEPARTMENT OF FOOD INSPECTION AND LABORATORY.	PER ANNUM	TOTAL.
Chief Food Inspector, at \$200 per month.....	\$2,400 00	
Two Assistant Food Inspectors, at \$125 per month.....	3,000 00	
Clerk to Food Department, at \$100 per month.....	1,200 00	
Assistant Attorney, at \$200 per month.....	2,400 00	
Two outside purchasing Inspectors, at \$60 per month	1,440 00	
Chief Chemist, at \$150 per month.....	1,800 00	
Four Assistant Chemists, at \$75 per month.....	3,600 00	
Microscopist, at \$100 per month.....	1,200 00	
Janitor, at \$60 per month.....	720 00	
Typewriter, at \$60 per month.....	720 00	
Messenger, at \$50 per month.....	600 00	
		\$19,080 00
SUPPLIES AND MAINTENANCE.		
Purchase of supplies, at \$50 per month.....	\$500 00	
Replenishing instruments, breakage, bottles, tubes, etc.—Chemical		
Laboratory—at \$50 per month.....	600 00	
Stationery and printing, at \$25 per month	300 00	
Telephone, at \$7.50 per month.....	90 00	
Transportation on buggy hire on inspection, at \$50 per month.....	600 00	
Incidental expense, at \$25 per month.....	300 00	
		2,490 00
Permanent improvement—Increase plant for Chemical Laboratory and		
Microscopist.....		1,500 0
Total.....		\$22,830 00

SCHEDULE C.

VETERINARY AND CATTLE DEPARTMENT.	PER ANNUM.	TOTAL.
Veterinary Surgeon, at \$150 per month.....	\$1,800 00	
Six Dairy Inspectors (investigating condition of all dairies and cow ranches in the country). at \$75 per month.....	5,400 00	
Four Cattle Inspectors (administering the tuberculin test to cattle), \$100	4,800 00	\$12,000 00
SUPPLIES AND MAINTENANCE.		
Rent of quarantine slaughter-house, at \$25 per month	300 00	
Vaqueros (caring for cattle, etc.), at \$50 per month.....	600 00	
Feed and expenses, at \$50 per month.....	600 00	
Printing and stationery, at \$25 per month.	300 00	
Cost of instruments and hypodermic needles, thermometers, etc., at \$50 per month	600 00	
Transportation for six Dairy Inspectors, at \$150 per month.....	1,800 00	
Incidental expenses, at \$25 per month.....	300 00	4,500 00
Total.....		\$16,500 00

RECAPITULATION.

	AMOUNT.	TOTAL.
Schedule A--Milk Inspector.....	\$17,460 00	
Schedule B--Food Inspector and Laboratory	21,570 00	
Schedule B--Permanent increase Laboratory.....	1,500 00	
Schedule C--Veterinary and Cattle Department.....	16,500 00	
Total.....		\$57,030 00

Language to me is inadequate to express at this time the beneficial results that will accrue from a successful consummation of this crusade, and I can assure you, gentlemen, that as long as the present Board of Health has the matter in charge there will be no relaxation in their efforts until we can guarantee the public that the adulteration of foods is a thing of the past.

And now, in conclusion, I desire to say to the consumer, the manufacturer, the press and the Courts, co-operate with us, and the day is not far distant when our products will be sought from the markets of the world.

All of which is respectfully submitted.

Very respectfully, your obedient servant

JAMES P. DOCKERY,
Chief Food Inspector.

NOTE--For List of Samples of Food Inspected, Reports on Analyses, Arrests and Disposition of Cases, see Appendix.

FOOD INSPECTORS' REPORT.

SAN FRANCISCO, July 1, 1897.

*To the Honorable the Board of Health
Of the City and County of San Francisco—*

GENTLEMEN: I herewith submit a report in full of the work done at the four Milk and Food Stations, from the date of their opening, November 11, 1896, up to June 30, 1897 :

STATION No. 1--CLAY-STREET WHARF.

J. S. REGAN..... Deputy Food Inspector.

HARRY O'DONNELL..... Deputy Food Inspector.

CITY CHEMIST'S REPORT.

SAN FRANCISCO, August 30, 1897.

*To the Honorable the Board of Health
Of the City and County of San Francisco—*

GENTLEMEN: I beg to present the following report on the analytical work by your Chemical department during the past year, from the time that the laboratory was instituted about the second week of December, 1896, up to June 30, 1897.

The first report comprised 31 samples of Tomato Catsup, of which 2 only were free from antiseptics, the remainder were found to contain either salicylic acid or boracic acid, and 16 were colored with aniline dyes.

In connection with this subject it may perhaps be well to state that inasmuch as the greater number of the samples were very liquid and deficient in tomatoes, your Honorable Body had adopted a standard requiring all tomato catsups to contain 20 per cent. of total organic solid, including the ash, a matter that does not seem to be known in general by manufacturers.

LIST OF TOMATO CATSUPS AND THEIR ADULTERATIONS.

No.	DESCRIPTION OF SAMPLE.	ADULTERATION	COLOR.
1	Van Campe's Pure, Cincinnati, O.....	Salicylic acid....	Coal tar color.
2	Uncle Tom's Home Made, Western Preserve Co., S. F.....	Salicylic acid....	Coal tar color.
3	Smith's Cash Store, San Francisco.....	Coal tar color.
5	Curtis Bros., New Label, Rochester, N. Y.....	Salicylic acid....
6	Pure.....
7	Snider's Home Made, Cincinnati, Ohio.....	Salicylic acid....
8	The Best, J. O. Schimmel & Co., Philadelphia.....	Salicylic acid....	Coal tar color.
9	Fischer Packing Co., San Francisco.....	Salicylic acid....	Coal tar color.
10	H. J. Heinz & Co. (Keystone), Pittsburg.....	Salicylic acid....	Coal tar color.
11	Connoisseur, Camden, N. Y.....	Salicylic acid....	Coal tar color.
12	Mau, Sadler & Co., Bar Brand.....	Salicylic acid ..	Coal tar color.
13	Bar Harbor, (location unknown).....	Salicylic acid....	Coal tar color.
14	Saunders' Star; Saunders, San Francisco.....	Salicylic acid....
15	Stutz Bros., Perfection, San Francisco.....	Salicylic acid....
16	S. C. Hazard & Co., Shrewsbury, N. Y.....	Formalin.....
17	Lewis Packing Co., San Francisco.....	Salicylic acid....	Coal tar color.
18	Atlantic Packing Co., Camden, N. Y.....	Salicylic acid....
19	Pure.....
20	Cutting Packing Co., San Francisco.....	Salicylic acid....
21	Irvine Bros., New Process, San Francisco.....	Salicylic acid....
22	High Grade Catsup, (name not known).....	Salicylic acid....
23	Superior Catsup, Fabian Bros., San Francisco.....	Salicylic acid and Borax	Coal tar color.
24	Golden Star, Tillman & Bendel, San Francisco.....	Salicylic acid
25	Extra Fine, Phil. Manf. Co., San Francisco, Cal.....	Salicylic acid....
26	Pacific Marine Supply Co., City and County Hospital.....	Salicylic acid....	Coal tar color.
39	Pure.....
42	New Process, John Loeffler, San Francisco, Cal.....	Salicylic acid ..	Coal tar color.
91	Win. Cluff & Co., San Francisco.....	Salicylic acid....	Coal tar color.
144	Maas Packing Co., 1421 Valencia St., San Francisco.....	Salicylic acid.... Boric acid	Coal tar color.
212	Columbia Catsup, Mullen-Blackledge Co., Indianapolis	Salicylic acid....	Coal tar color.

CONDENSED MILK AND EVAPORATED CREAM.

Under this head are classed preparations which consist of cows' milk condensed with or without the addition of sugar, and therefore should represent the constituents of pure milk, both qualitatively and quantitatively in a concentrated form.

When sugar is added it is then usually called condensed milk; when it is omitted it is then known as evaporated cream, although made from milk.

On referring to the tabulated analysis given below, it will be seen that the nutrient qualities of some of the samples are greatly at variance. Out of 14 samples, 7 present approximately pure condensed milk, representing a standard of about three parts of pure milk condensed to one part. The remainder seems to have been made either from skim-milk or milk which was very poor in butter fat. We feel gratified to announce that manufacturers are making laudable efforts to bring their condensed milk up to a uniform standard.

Number	DESCRIPTION OF SAMPLE.	Water.....	Butter Fat....	Albuminoids.	Milk Sugar....	Cane Sugar..	Ash.....
29	Howells' Evaporated Cream	69.28	8.32	11.14	9.28	1.98

193	Imperial Brand Cream.....	11.68

FRUIT JELLIES, JAMS AND MARMALADES.

These preparations, if they are properly made and from the best materials, stand highly as delicacies, as articles of food.

The analytical data of this report shows that in no line of food products has adulteration and substitution been carried on to such an alarming extent.

Of 57 samples analyzed, 28 only had the chance of being called pure, 20 were adulterated and 39 fraudulent substitutes. A majority of those, although passed as pure jellies, made from their respective fruits, were not made from choice fruit; some were made from immature fruit, some from over-ripe fruit that had already passed into a state of incipient putrefaction.

Then jellies that had through excessive and prolonged boiling lost much of their delicate flavor and their natural color, assuming a more or less orange off-color.

HEALTH OFFICER'S REPORT.

No. of Sample.	FROM WHOM PURCHASED.	DESCRIPTION OF SAMPLE.	RESULTS OF ANALYSES.
81	Martin, Feuster & Co., 309 Clay, S. F....	Currant Jelly; put up in 25-pound pails. Said to be made in St. Louis. Label on pail mutilated.....	Is made from apple jelly and starch paste. Contains acetic acid, and is colored with aniline dye. It is not currant jelly.
82	C. E. Whitney & Co., cor. Sacramento and Davis.....	Currant Jelly; put up in 25-pound pails. The New Jersey Preserving Co., Camden, N. Y.....	Is made from apple jelly and glucose. Contains acetic acid, and is colored with coal tar colors (kaleine). It is not currant jelly.
83	Getz Bros., sole agents, 111 California..	Currant Jelly; put up in 25-pound pails. Labeled as absolutely pure and made from selected fruit.....	Is made from apple jelly and glucose; contains only a small amount of cane sugar and is colored with coal tar color. It is not currant jelly.
85	Dairymen's Union, Dairy Produce, 113 Davis.....	Currant Jelly; put up in 25-pound pails. Star Preserving Co., Oueida, N. Y.....	Is made from apple jelly; contains both glucose and cane sugar, and is colored with coal tar colors. It is not currant jelly.
99	William Cline & Co., 949 Market....	Melrose Currant Jelly (glass jar). Wellman, Peck & Co., San Francisco.....	This jelly is a mixture of pure 2.5 currant jelly with 3.5 apple jelly. It is adulterated currant jelly.
97	Is pure currant jelly.
103	Emporium, Market street.....	Currant Jelly (tin can). Solar Brand. Wm. Sanford & Co., San Francisco.....	Is currant jelly adulterated with starch.
104	A Quade & Co., 626 Market.....	Currant Jelly (glass jar). N. Giedzen, San Francisco....	This jelly is composed of 4.5 of pure currant jelly and 1.5 of apple jelly. It is therefore adulterated currant jelly.
105	Currant Jelly (glass jar)....	Is pure currant jelly.

No. of Sample.	FROM WHOM PURCHASED.	DESCRIPTION OF SAMPLE.	RESULTS OF ANALYSES.
109	Smith's Cash Store, 21 Market.....	Fidelity Brand, California Currant Jelly (tin can). Smith's Cash Store, San Francisco.....	This sample consists of $\frac{1}{4}$ of currant jelly and $\frac{3}{4}$ of apple jelly. It is adulterated currant jelly.
110	Currant Jelly (tin can).....	Pure currant jelly.
111	Currant Jelly (glass jar).....	Is pure currant jelly.
174	Jacobs & Christie, 310 Sixth.....	Currant Jelly (tin can). Made from choice California fruit. Star Brand.....	This jelly is nothing but apple jelly artificially colored. It is not currant jelly.
172	Johnson Bros., 313 Sixth	Currant Jelly (glass jar). Pacific Coast Syrup Co., 713 Sansone street, San Francisco.....	This jelly is simply apple jelly artificially colored. It is not currant jelly.
171	Johnson Bros., 313 Sixth.....	Currant Jelly (tin can). Cutting Packing Co., San Francisco.....	This jelly consists of $\frac{1}{2}$ of pure currant jelly and $\frac{1}{2}$ apple jelly. It is an adulterated currant jelly.
169	Solomon Bros., 396 Sixth.....	Solar Brand (tin can). Currant Jelly. Green, Sanford & Co., San Francisco.....	It consists of $\frac{1}{4}$ of pure currant jelly and $\frac{3}{4}$ of apple jelly. It also contains starch. It is an adulterated currant jelly.
164	Pure currant jelly.

Made from apple jelly; contains a large proportion of glucose and is colored with coal tar colors. It is not either currant, raspberry, strawberry or blackberry jelly.

HONEY.

Pure honey when removed from the cells of the honey-comb is liable to candy, that is, the sugars of the honey crystallize, the honey becoming solid and in this condition unsaleable. In order to prevent this candying, dealers add usually about 20 per cent. of either glucose or cane sugar syrup. As these additions can be considered harmless adulterations, such additions might be allowed with the proviso that such percentage of added glucose or cane sugar syrup be plainly so stated on the label.

Of fifteen samples of Honey analyzed seven of these (Nos. 30, 33, 36, 38, 41, 53 and 59) were pure.

The following brands were found to be adulterated.

No. 32.—Pure San Diego Honey. Honey mixed with cane sugar syrup.

No. 43.—Pure Los Angeles Honey. Honey mixed with cane sugar syrup, watered.

No. 50.—Honey, source unknown, contains cane sugar syrup.

No. 55.—Pure White Clover Honey is nearly all glucose.

No. 56.—Honey, source not indicated. Not pure; honey mixed with glucose.

No. 58.—Pure San Diego Honey. Honey mixed with cane sugar syrup, and watered.

ANALYTIC MISCELLANIES.

RASPBERRY SYRUP.

No. 78.—Compounded Raspberry Syrup, made from cane sugar syrup and glucose, colored with fuchsine (aniline dye). It contains no raspberries.

No. 214.—Raspberry Syrup. Pure.

Much of the raspberry syrup sold is not raspberry syrup; the fraudulent forms the rule, the pure the exception.

COW'S MILK.

No. 187.—City and County Hospital—Sp. Gr., 1.035; Fat, 3.29; Solids not fat, 9.44.

No. 188.—City and County Hospital—Sp. Gr., 1.030; Fat, 6.38; Solids not fat, 8.68.

No. 187 represents normal cows' milk, fully up to the standard.

No. 188 shows a milk very rich in butter fat.

No. 219.—Hominy. Contains no metallic or organic poisons.

No. 184.—Paskola, a flesh forming and artificially-digested food; the Predigested Food Co., No. 30 Reade street, New York. It consists of commercial glucose with a small quantity of acid phosphate of lime. A trade fraud.

No. 90.—City and County Hospital—Claret Wine. A young wine, not adulterated.

Respectfully submitted,

W. T. WENZELL.

REPORT OF CITY BACTERIOLOGIST.

San Francisco, July 27, 1897.*To the Honorable the Board of Health—*

Gentlemen: Herewith I have the honor of submitting the second annual report from the Bacteriological Department:

The most important feature in this department has been the establishment of a fully-equipped laboratory in one portion of the room allotted by the City Hall Commissioners for the purposes of the Food Inspection Station. This has placed the efficiency of this branch of the Health Department upon the highest plane. In logical sequence comes the establishment of a system of greater accuracy in the diagnosis of certain of the zymotic diseases. In accordance with instructions received from your Honorable Body, a system has been put in force by which the physicians of this city and county are enabled to procure sterilized swabs at convenient drug stores, a list of which has been mailed to every practicing physician. Accompanying these swabs are explicit, printed directions as to their use and the disposition to be made of the same. Several different leaflets, explaining the objects to be attained, have been likewise mailed to the medical profession. This system has been for the purpose of enabling the medical profession to learn accurately, the nature of such cases of suspicious acute throat-affections, as between diphtheria, and other diseases not diphtheria—in the former case a very rigid quarantine being necessarily enforced upon the household so infected, and in the latter case, not; the acts of the Health Inspectors in each instance being governed by the report of the Bacteriologist. This system has been modeled after that adopted by the Health Boards of each of the greater cities of the country, and recommended by the highest authorities on these subjects. As evidence of the gap which has been filled by the adoption of this system, repeated commendatory reports have been received from the members of the medical profession of the city. Strange to relate, there is a certain indifference to—it cannot be ignorance of—the advantage of this system on the part of certain of its members of the profession. Death certificates are sent in and cases reported at the Health Office of diphtheria of which we have no knowledge from a bacteriological examination, and in which we are certain that no bacteriological examination has been made otherwise.

The inaccuracy of such methods works a hardship to the members of a family so afflicted, beside affecting the statistics of the Health Department. It is to be hoped that some means of enforcing uniformity in the tabulation of such cases under their proper heading will form part of our municipal ordinances at an early date.

The effectiveness of the Department of Food Inspection has been heightened in certain respects by the examination of the portions of carcasses of cattle, the subjects of tuberculous disease; by the examination of various samples of suspicious milk, and by the examination of various samples of drinking water from sources of private supply in the city.

The appointment of an assistant by your Honorable Body has greatly increased the effectiveness of the Laboratory in all respects.

When it shall be made possible for your Honorable Board to enforce the regulation relative to the reporting of contagious and infectious diseases to the Health Office, it will be in order to place the services of the Laboratory at the disposal of the medical profession, through the Bacteriologist, in the matter of the diagnosis of typhoid and tuberculosis by methods recognized as being reasonably accurate.

Trusting to be the means of still further enhancing the efforts of your Honorable Board in the Department of Bacteriology and Pathology, I am

Very respectfully yours

JOHN C. SPENCER, M. D.,
City Bacteriologist.

REPORT OF VETERINARY SURGEON.

San Francisco, July 1, 1897.

*To the Honorable Board of Health
Of the City and County of San Francisco—*

Gentlemen: I respectfully present the following work performed by the Veterinary during the year commencing July 1, 1896, and ending July 1, 1897:

WORK ACCOMPLISHED.	NUMBER.
Number of dairies inspected.....	152
Number of cattle tested with tuberculin.....	199
Number of cattle condemned with tuberculin test.....	61
Number of cattle killed.....	51
Number of cattle treated as suspects.....	22
Number of cattle inspected.....	8,391
Number of cattle condemned.....	89
Number of cattle showing symptoms of tuberculosis.....	1,049
Number of horses inspected for glanders.....	16
Number of horses killed with glanders.....	4

The prevalence of tuberculosis in our dairy herds at once prompts the urgent necessity of its eradication, and in presenting the foregoing report to your Honorable Body, I am desirous of calling your attention to the large percentage of consumptive cows which are present in our dairies, even to an external physical examination. That the disease is prevalent to a greater extent than can be ascertained by such limited examination is demonstrated by the results of our tuberculin tests. The subject of tuberculosis in man and its relation to the same disease in the domesticated animal has been so universally discussed that it is needless for me to dwell on what are well known facts regarding it, all being more or less familiar with the disease. Sufficient to say that the enormous fatality in consumption in the human subject forces upon us the necessity of exerting every effort to effect its eradication. All hygienic measures are directed to fight this dread assailant of the public health, and as the dairy is the source from which the disease is to a large extent propagated, the fact at once suggests itself, that the dairy is where we should attempt to fight it. Since the disease lurks in all kinds and conditions of animals, fat or lean, well or ill kept, we cannot but feel exultant at the fact that a most valuable assistant has been applied which enables us to detect the disease no matter what conditioned animal may be its host. That the tuberculin test is a most reliable factor in the detection of tuberculosis is a recognized fact. Of about two hundred autopsies performed by me, by means of the tuberculin test upon animals condemned and slaughtered during my work for your Honorable Board, not one has failed to present lesions of tuberculosis. Since the present crusade upon the dairies commenced it has been the means of producing a great decrease in the number of sick cows in our dairies, as all the dairymen are making every effort to have nothing but healthy cows. Since few are conversant with the mode of applying the tuberculin test I herewith subscribe a description of the method which is followed by my department during an inspection. On arriving at a dairy the cows are each given a number and accurately described, so that an exact and corresponding record may be kept. A series of eight temperatures at intervals of two hours is then taken to ascertain that the animal's condition before inoculation is normal, as frequently there may be other conditions present which cause an abnormal rise in temperature, in which case the tuberculin test would be void. After ascertaining that the animal is not suffering from any ailment which would cause an abnormal temperature, it is then inoculated. After the lapse of from six to eight hours after inoculation a series of from twelve (12) to sixteen (16) temperatures are taken at intervals of about an hour apart, a conclusion is arrived at as to whether the cow is consumptive, the diagnosis being arrived at by a rise in temperature of from three (3) to five (5) degrees. During an inspection the utmost precaution is taken that there shall be no opportunity for transmission of disease from one cow to another, as a separate thermometer is used for each cow, and no temperature taken until the thermometer has been perfectly sterilized by being placed in a strong bichloride solution of mercury. An aseptic area is prepared before inoculation, and a separate and sterilized needle is used for each and every cow. The syringes are also sterilized, and in fact no detail, no matter how slight, has been omitted that would help to make the inspection a perfect success. No greater care could be exercised in a more serious surgical operation than is used in the method of applying the test. Each animal is numbered and exactly described, so that there can be no mistakes made in the records. Those cows which are tested are tagged with a tag having the word "passed" or "condemned" upon it, as the case may be. Those tags in the ears of the cows which are passed are kept permanently there, and are evidence that the animal has been inspected and passed. Another matter, gentlemen, which I am very desirous of presenting for your consideration is the advisability of having in connection with the veterinary work a quarantine station in which could be placed animals which have already been tested and condemned awaiting slaughter, animals which are under sus-

picion of having some contagious disease, and, chief and foremost, a place where a number of animals owned by different people may be tested at the same time. As you are aware, gentlemen, there are hundreds of owners in this city and county who own from one (1) to two (2) cows, and even as many as fifteen (15) and twenty (20), and as they sell milk to their immediate neighbors there is no reason why their cows should not be inspected just as well as those cows which are owned by large dairymen. As a matter of fact these are the kind of cows from which the greater danger arises, as they usually supply some too confident neighbor with milk for the child, and the neighbor thinks that as the milk is from one or two cows it must be healthy, where, as a matter of fact, these are the worst kept and most likely to be diseased cows of any. This would facilitate the inspection, as sixty (60) or eighty (80) cows could be tested at the same time. Another fact in connection with this station is in the case of a glandered horse being kept in a stable where other horses are kept, the danger of contagion is very great, not only to other horses but to those in attendance. It would also facilitate the testing of horses under suspicion. The veterinary inspection of cows has been able to go on through the courtesy of Chief Food Inspector Dockery, who detailed for my work four (4) men, who had been collecting in various parts of the city samples of food and milk for analytical purposes, and in the event of these men being withdrawn from the dairy inspection the work will be able to go on but very slowly. To sum up what will be necessary to make this department anything like efficient, I respectfully call the attention of your Honorable Board to Schedule "B" of the report of Chief Food Inspector Dockery. All of which is respectfully submitted.

I. W. O'ROURKE, Veterinary Surgeon.

CITY CEMETERY SUPERINTENDENT'S REPORT.

SAN FRANCISCO, July 1, 1897.

*To the Honorable the Board of Health
Of the City and County of San Francisco—*

GENTLEMEN: I have the honor of submitting for your consideration my annual report for the fiscal year ending June 30, 1897.

City Physician.

REPORT OF THE ASSISTANT CITY PHYSICIAN AND POLICE SURGEON.

SAN FRANCISCO, July 1, 1897.

To the Honorable the Board of Health—

Gentlemen: I herewith respectfully submit my annual report for the fiscal year ending June 30th, 1897.

The total number of cases treated at the City Receiving Hospital during the year 1896-97 was 5,753, of which 503 were insane. To this number is to be added the number of patients treated at the Park Branch Receiving Hospital, amounting to 135 cases, which makes a grand total of 5,888 cases.

The chief event during the past fiscal year was the opening of two Branch Receiving Hospitals, one at the Golden Gate Park, the other on the water front. The Park station, which began its activity on February 9th, has amply proven the necessity of an emergency hospital in that locality, and has met with universal satisfaction on the part of the public. It is but an act of duty to extend here also the Park authorities the most sincere thanks for their kindness and liberality, with which they supported the plans of the Health Department. Owing to some unforeseen delays the water front Branch Receiving Hospital could not be put into operation before the close of the fiscal year, though it was practically completed in every detail. There is no doubt that it will prove a great blessing to this most industrious portion of the city where traffic is so strong and the chances of an accident so numerous. The State Harbor Commissioners through their generosity in erecting a model hospital in the most favored portion of the water front, have merited for themselves the thankfulness of the Health Department and gratefulness of the people.

Of other improvements in the Receiving Hospital service I have yet to mention the supply of new instruments which we received in March. The acquisition of new operating rooms, furniture and of new quarters for the insane, however, remain a prime desideratum, the realization of which we must hope from the coming year. Yours, most respectfully,

DR. C. WEIL, Police Surgeon.

REPORT OF PARK RECEIVING HOSPITAL.

D. Conrad Weit—

DEAR SIR: I herewith submit my annual report from February 7, 1897, to July 1, 1897.

DISPOSITION OF CASES.

NAME OF HOSPITAL, ETC.	NUMBER.	TOTAL.
Total number of persons admitted.....		135
Sent to their homes.....	124	
Sent to City Prison.....	2	
Sent to City Receiving Hospital.....	6	
Sent to City and County Hospital.....	1	
Sent to St. Mary's Hospital.....	1	
Sent to St. Luke's Hospital.....	1	
Total.....		135

Very respectfully,

J. T. STAFFORD, M. D.

W. W. WYMORE, M. D.

CLASSIFIED LIST OF AILMENTS AND INJURIES TREATED AT THE PARK RECEIVING HOSPITAL, FROM FEBRUARY 9, TO JULY 1, 1897.

Abrasions of arms, hands and fingers.....	11
Abrasions of body, neck and shoulders.....	1
Abrasions of face, head, eye and ear.....	21
Abrasions of feet, legs, toes and knee	6
Alcoholism.....	1
Acute enteritis.....	1
Burns of arms, hands and fingers.....	1
Concussion of brain.....	3
Contusion of arm, hand, wrist and elbow.....	3
Contusion of body, back and breast	4
Contusion of eyes, face, forehead, nose and lips.....	8
Contusion of head, scalp and ear	7
Contusion of fingers and toes	2
Contusion of leg, foot, ankle and knee.....	3
Contusion of hip, groin, side, thigh and abdomen.....	2
Dislocation of finger.....	2
Dislocation of shoulder.....	2
Dislocation of wrist.....	1
Epilepsy	4
Epistaxis	1
Foreign body in hand.....	1
Foreign body in eye.....	1
Furuncle.....	2
Fever (malaria).....	1
Fracture of fibula	3
Fracture of finger	1
Fracture of greenstick	1
Fracture of maxilla (inferior).....	2
Fracture of nasal bones (compound).....	2
Fracture of ribs.....	2
Fracture of radius	1
Fracture of scapula.....	1
Fracture of skull.....	1
Fracture of ulna (compound).....	1
Fracture of tibia.....	3
Gastralgia.....	1
Hysteria	1
Internal injuries.....	1
Neuralgia.....	2
Phthisis	1
Poisoned by cyanide potash.....	1
Sprain of ankle.....	

CLASSIFIED LIST OF AILMENTS AND INJURIES—CONCLUDED.

Sprain of back.....	1
Sprain of wrist.....	7
Submersion.....	2
Syncope.....	1
Shock (electric).....	1
Tonsillitis.....	1
Toothache.....	1
Wounds of arm and elbow.....	2
Wounds of eye, eyebrow and eyelid.....	2
Wounds of chin.....	1
Wounds of face and cheek.....	4
Wounds of fingers and thumbs.....	5
Wounds of forehead.....	5
Wounds of hand.....	5
Wounds of leg.....	2
Wounds of lip.....	2
Wounds of scalp.....	9

ALMSHOUSE REPORT.

SAN FRANCISCO, July 1, 1897.

*To the Honorable the Board of Health
Of the City and County of San Francisco—*

GENTLEMEN: I respectfully submit to your Honorable Body the following report of the condition and affairs of the City and County Almshouse for the fiscal year ending June 30, 1897:

NUMBER OF INMATES ADMITTED.

Males.....	524
Females.....	128
Total admitted.....	652
Remaining in the House July 1, 1896.....	870
Total to be accounted for.....	1,522

NUMBER OF INMATES DISCHARGED, ETC.

Number of inmates discharged at own request.....	296
Number of inmates ran away	34
Number of inmates discharged for cause.....	111
Number of inmates transferred to other institutions.....	33
Number of inmates died	119
Number of inmates discharged when time was up.....	8
Remaining in the House July 1, 1897.....	921
Total.....	1,522
Daily average number of inmates..	912

ALMSHOUSE REPORT.

255

ALMSHOUSE EXPENSES FOR 1896-97.

Salaries of officers and employees	\$18,506 98
Provisions, groceries, fruit, etc.....	27,974 18
Dry goods, clothing, etc.....	4,502 97
Tobacco.....	774 93
Medicines, drugs, liquors and alcohol.....	1,118 46
Repairs and materials of buildings.....	2,526 18
Repairs of ranges and stoves.....	642 19
Repairs of vehicles and horseshoeing.....	671 15
Feed of horses and cattle.....	2,038 57
Fuel, light and water.....	6,718 42
Tools, implements, hardware, etc.....	902 75
Laundry supplies	244 04
Furniture, carpets, paints and oils.....	543 37
Printing, stationery and stamps.....	167 70
Five horses.....	725 00
Telephone.....	93 87
Material and labor for construction of additional accommodations for 50 inmates	2,057 67
Erection of, machinery for, and labor on new laundry and new morgue (concrete)	6,024 77
Total.....	<u>\$76,233 10</u>

Total cost of food for 1896-97.....	\$27,974 18
Less amount turned into treasury from sale of junk.....	535 02
	<u>\$27,439 16</u>

Daily average number of officers, employees and inmates	941
Daily cost of food per officers, employees and inmates.....	7.99c
Total cost of dry goods, clothing, bedding, shoes, etc.....	\$4,502 97
Daily average number of inmates.....	912
Daily cost per inmate of above articles.....	1.352c

According to our books the total amount paid out for 1896-97 was.....	\$76,233 10
Less amount turned into treasury from sale of junk, etc.....	535 02
	<u>\$75,698 08</u>

Daily cost of institution.....	207 39
Yearly cost per inmate.....	83 00
Daily cost per inmate.....	.2275

HEALTH OFFICER'S REPORT.

The following is a résumé of the work done in the different departments during the year:

TAILORING DEPARTMENT.

Men's cassimere coats made.....	46
Men's cassimere pants made	79
Men's cassimere vests made	48
Men's blue jean overalls made.....	243
Men's blue jean blouses made	85
Coats, pants, vests, etc., repaired.....	332

SHOEMAKING DEPARTMENT.

Men's shoes made, pairs.....	117
Men's slippers made, pairs.....	10
Men's shoes repaired, pairs	785
Women's shoes repaired, pairs.....	108

WOMEN'S DEPARTMENT.

The female inmates have made:

Overshirts for men.....	628
Undershirts for men.....	213
Drawers for men.....	283
Chemises.....	99
Nightgowns	146
Flannel undershirts for women	42
Flannel shirts.....	10
Women's stockings, pairs.....	48
Women's aprons.....	74
Burial caps for women.....	12
Bedspreads	283
Bed sheets.....	731
Pillow slips.....	451
Pillow ticks.....	103
Bed ticks.....	117
Roller towels.....	13
Shrouds for men.....	70
Shrouds for women.....	44
Curtains	56
Table cloths.....	18
Dresses for women.....	63

FARM.

	ACRES
House, lot No. 1, grounds and road.....	5
No. 2 building, grounds and road.....	5
Hospital lot, grounds and road.....	4
No. 4 building, grounds and road.....	2
Under cultivation:—	
Potatoes.....	30
Hay.....	10
Pasturage.....	8
Vegetables.....	12
Waste lands.....	4
Total	80

LIVE STOCK.

Horses	14	Hogs, small.....	60
Cows.....	2	Chickens.....	66
Calves	1	Ducks	5
Hogs, large	40		

During the fiscal year we received from sales:

Junk, bones and rags.....	\$137 20
Hogs, 12,675 lbs.....	363 80
1 calf.....	4 00
Collected from Troy Laundry Co. for pipes from dryer in new laundry...	30 02
Total.....	\$535 02

which amount has been turned over to the Treasurer.

We also turned over to the Treasurer the effects of deceased inmates, in cash, \$152.87, besides many trinkets of no value.

For the consumption of inmates and the use of the institution, we killed five hogs, weighing 1,618 pounds.

By order of the Chief Food Inspector, one cow, infected with tuberculosis, was killed.

One horse, condemned by Veterinary Surgeon, was killed.

HEALTH OFFICER'S REPORT.

The original appropriation for the City and County Almshouse for the fiscal year 1896-97, was.....	\$80,000 00
To provide for the accommodation and support of 50 more inmates, there was appropriated at a meeting of the Board of Supervisors, held September 28, 1896 (see Order No. 3,018), an additional amount of.....	2,500 00
Making a total of.....	\$82,500 00
According to our books the total amount paid out for 1896-97 was.....	\$76,233 10

Which amount includes the materials and labor for the construction of the above-mentioned accommodations for fifty additional inmates, at an expense of \$2,037.67. Included in this item is also the cost of a new reading room at No. 2 Building, 50 x 30 feet.

As estimated in our report of last year, we have built a new laundry, furnished with new and modern machinery, including a new 25-horse power engine and boiler. Also a new morgue. At a total cost of \$6,024.77.

The old laundry, which was a standing menace to the main building, was torn down.

The new buildings have foundations, walls and flooring of concrete cement, with a tin roof, and were built by the inmates, with the exception of the foreman and finishers.

We also made 227 feet of artificial stone curbing for the improvement and adornment of the grounds. The building of the new laundry made it necessary to lay 175 feet of six-inch new iron-stone pipe to connect with the main sewer.

For the purpose of saving water that was going to waste a new six-inch ironstone water pipe, 332 feet in length, was laid from the wells to the reservoir, doubling the supply of water.

As a protection against fire, 135 feet of two-inch pipe has been laid to the church from the main water pipe, and seven additional fire plugs put in.

We also relaid and put to use 800 feet of three-inch old iron pipe, which had not been in use for many years.

We bought a new boiler and stack for the kitchen at an expense of \$425.

A new balcony was built at the south end of the main building, new furnaces in the basement and a new chimney.

The hulls and main stairways of No. 1 and No. 2 buildings have been re-plastered and painted, and stables and fences whitewashed.

Two hundred yards of drains have been built to carry off seepage water.

I also built a shed from the reading room to the dining room, protecting the inmates from the inclemency of the weather.

I also relaid the pipes from the tanks to building No. 1 and put in fire plug, so that the cottage and building No. 1 are now protected against fire.

I have also had ladders made and put at convenient and necessary places about the building.

On the grounds on the northwest side of building No. 2 we have planted elm trees, thereby improving the appearance of that portion of the grounds, and have made a garden with all sorts of vegetables out of what was heretofore a waste, adding over an acre to the land already under cultivation.

We have put one night nurse in No. 4, women's department, and one night nurse in No. 3, who acts as watchman. There are 114 inmates in No. 3 building, and they have heretofore been without a night nurse.

In No. 4, women's department, there are 30 inmates, most of whom are helpless, and who have heretofore been without a night nurse, the work having been done by one woman nurse.

Nearly all of the vegetables consumed by the inmates during the year have been grown on the grounds, and there are thirty acres of potatoes just maturing.

We still supply water to an adjoining milk ranch, and receive in return three gallons of milk daily, valued at fifty cents.

As above shown, the actual cost of sustenance of the institution was...	\$63,150 66
Cost of new accommodations	2,057 67
Cost of new laundry and new morgue (machinery, \$3,125).....	6,024 77
Total.....	\$76,233 10
By resolution of the Board of Supervisors, the following amounts from the City and County Almshouse fund were transferred back to the Treasurer: April 19, 1897, Resolution No. 16,239.....	
May 3, 1897, Resolution No. 16,366.....	3,000 00
June 1st, Resolution No. 16,528.....	1,500 00
	1,000 00
	<hr/>
Balance unexpended and returned to the Treasurer	\$81,733 10
	766 90
	<hr/>
	\$82,500 00

From the opening of the Almshouse to the present time, 17,504 inmates have been admitted and provided for.

Daily average number of inmates for past year.....	912
Daily average previous year.....	847
An increase of.....	65

Deaths during previous year.....	146
Deaths during past year.....	119

A difference of.....	27
or 24.31 per cent decrease.	

The Almshouse tract containedacres 80

The City has given to the Balboa Boulevard two strips of land, 64 feet wide by 787 feet

long, and 100 feet wide by 220 feet long, respectively, being 72,368 square feet, or acres 1.673

Leavingacres 78.327

In consequence of the donation of this land of the Almshouse to the Boulevard, it has been necessary to build a new fence, 1,312 feet long.

During the construction of the new boulevard, we furnished soup daily to from 50 to 800 men, at an average cost of five dollars per day for a period of three months.

From the trees cut on the land adjoining the boulevard about 100 cords of wood were obtained, valued at \$800.

Whenever it has been necessary, we have repaired the public roads in the vicinity.

HEALTH OFFICER'S REPORT.

All the water needed to set the macadam on the Balboa Boulevard was taken from our tanks.

We fitted out with bedding the Park Receiving Hospital, and have boarded the doctor and ambulance driver since the first of March, 1897.

Our sincere thanks are due to the Honorable Board of Health and the Honorable Board of Supervisors, who by their support and co-operation and their valuable suggestions and aid have facilitated and encouraged our endeavors.

We also desire to thank Doctors Pischl and Cameron for their gratuitous attendance and services as oculists to the inmates.

Thanks are also due to Rev. W. H. Tubbs for his long and continuous service to the institution and for bringing reading matter, clothing, and many other useful articles, and to the Rev. D. O. Kelly for his regular ministrations to the members of his flock here, and to the good fathers of St. Dominic's and St. James' parishes, whose services have been given to the inmates every Sabbath, and who have always come promptly to the sick who may have needed their ministrations; and also to the various members of the Salvation Army, who have made weekly visits to the inmates.

During the past year there was inaugurated a series of monthly entertainments for the amusement of the inmates. We are under obligations to the kind people who have contributed their time and talent on those occasions, and to the various societies and individuals who have contributed reading matter and other things to the institution, all of which is appreciated.

Respectfully submitted,

E. A. REDDY,

Superintendent.

REPORT OF MEDICAL DEPARTMENT OF ALMSHOUSE.

SAN FRANCISCO, July 1, 1897.

*To the Honorable the Board of Health**Of the City and County of San Francisco—*

GENTLEMEN: I hereby present to your Honorable Board the yearly report of the Medical Department of the City and County Almshouse for the fiscal year ending June 30, 1897

Number of inmates July 1, 1897....	921
Average number of inmates.....	912
Number of deaths during year.....	119
Number of patients treated.....	4,104
Number of prescriptions.....	7,832
Cost of drugs, alcohol and liquors, etc.....	\$1,118 46

The general health of the inmates is good.

The hygienic condition of the wards, rooms, etc., due to careful attention to cleanliness and proper ventilation; and the sanitary condition of the buildings, lavatories, outhouses, etc., due to recent improved drainage and sewerage system, and plentiful use of disinfectants, is very creditable.

The following is the statistics of the daily average number of inmates, the number of deaths and also the expenses of the Medical Department for the last five years.

YEAR.	DAILY AVERAGE NUMBER OF INMATES.	DEATHS.	EXPENSES OF MEDICAL DEPARTMENT.
1892-93	752	139	\$1,591 08
1893-94	782	138	1,465 72
1894-95	824	166	1,439 31
1895-96	847	146	1,459 99
1896-97	912	119	1,118 46

Respectfully submitted,

W. E. CONLAN, M.D.,

Resident Physician

HOSPITAL REPORT.

SAN FRANCISCO, July 1, 1897.

*To the Honorable the Board of Health
Of the City and County of San Francisco—*

GENTLEMEN: I have the honor to present herewith for your consideration the forty-fourth annual report of the City and County Hospital for the fiscal year 1896-97.

The following summary has been compiled from the several statements enclosed herewith and which form a part of this report.

SUMMARY.

Patients in Hospital July 1, 1896	294
Patients admitted to the Hospital during the fiscal year	3,583
Total to be accounted for	3,877
Patients discharged cured	1,395
Patients discharged improved	1,237
Patients discharged unimproved	287
Patients sent to Alms-house	56
Patients referred to Insanity Commissioners	20
Patients died during the year	504
Patients remaining June 30, 1897	378
Total accounted for	3,877
Least number of patients during the year (July 5, 1896)	287
Greatest number of patients during the year (April 23, 1897)	410
Total number of days' treatment	130,253
Daily average of patients	357.04
Daily average of officers and employees	103.41
Percentage of deaths to results	14.11
Percentage of deaths to total number treated	13
Average time under treatment (days)	33.6
Cost of subsistence per person, per diem	\$9.169
Cost of subsistence per patient, per diem	0.217
Total expense per patient, per diem	0.735

HOSPITAL REPORT.

263

Total amount expended during the fiscal year.....	\$85,748 15
Expended for "special repairs".....	14,718 36
Drugs and provisions furnished Smallpox Hospital.....	2,089 84
Drugs furnished Magdalen Asylum.....	88 85
Actual outlay for current expenses.....	78,851 10
Amount of appropriation for Hospital purposes.....	\$75,000 00
Amount of appropriation for "special repairs".....	10,000 00
Deficiency met by transfer from the Almshouse appropriation and by special appropriations by the present Board of Supervisors.....	10,748 15

In the various monthly reports forwarded to the Board of Health since my assumption of the duties of Superintendent Physician, on January 15th of the present year, I have dealt in detail with the many irregularities of administration which occurred previous to my incumbency; therefore it will be almost unnecessary to burden this communication with a prolonged and elaborate recital of the numerous disagreeable circumstances which have marred the conduct of this Hospital, and which have tended to promote the unenviable public notoriety to which it has long been subject.

A brief reference, however, must be made to the disgraceful methods pursued in the disposition of the "Repair Fund" of \$10,000, granted as a special appropriation by the last Board of Supervisors for the purpose of improving the sanitary condition of the Hospital. This sum, had it been properly expended, would have been ample for the temporary improvement of the sewer system and a partial renovation of the interior of the buildings. There appeared to be an insatiable desire on the part of certain contractors employed to make the necessary repairs under this fund to pocket whatever they could secure of this money, and at the same time to do little or no work in return therefor. These facts were so palpable on my first tour of inspection as Superintendent Physician, that your Honorable Board was requested to appoint an expert to investigate the amount of work accomplished by these contractors, as well as the amount of money already paid to them. The revelations brought forth by this investigation showed gross overcharges and absolute dishonesty on the part of nearly every contractor engaged in the prosecution of this work. A list of the names of the culpable parties was submitted to your Board and also to the Grand Jury, together with an accurate detail of all labor performed and all overcharges. The Hospital Committee of the Grand Jury took a keen interest in this matter, and its members, Messrs. Brunt, Nobmann and Tracy, made many visits to the Hospital and made a close examination into the character of the derelictions, with the result that they confirmed in every respect the reports of the expert, Mr. Griffin, and further subjected all parties concerned to a most rigorous inquiry, which finally terminated in the indictment by the Grand Jury of several of the offenders. It is a matter of regret, however, that several of the perpetrators of the most apparent frauds have been reported by the District Attorney as immune from punishment, and that cases against them would not be actionable, their only offenses consisting of overcharges which were favorably passed upon by the last executive officer of this hospital and also by the Chairman of the Hospital Committee of the last Board of Supervisors, and their claims further approved by the Auditor of the City and County of San Francisco.

Reference to the various reports of the expert will show that enormous sums of money were paid to contractors for so-called kalsomining of various wards, and the concreting of limited areas of flooring. In all, the sum of \$1,275 was expended in the alleged kalsomining of thirteen wards with their corresponding vestibules and pantries, and, in addition, two small operating rooms. This work was of a crude and inferior character, and, instead of improving the appearance of the

wards, actually left them in a worse condition than before the work was commenced. During the administration of Superintendent Physician F. H. Titus, the kalsomining of all the wards was performed in a satisfactory manner by the labor of the inmates at the simple cost of the material used, amounting to about \$150. These figures speak for themselves, and comparison is not only odious but unnecessary.

The contractor in charge of the concrete work was so liberally paid in proportion to the amount of work performed by him that the Grand Jury, taking cognizance of his exorbitant demands for remuneration, returned an indictment against him. This indictment was subsequently set aside by reason of a technicality.

Four small wooden reel houses for the lodgment of fire hose were constructed in the hospital grounds and paid for out of the Repair Fund. The cost of the houses, outside of the price of the material used, averaged nearly \$40 each. This would represent the labor of ten carpenters for one day on each structure, or reversing the ratio, it would have taken one carpenter ten days to erect one reel house. Expert builders who have examined these reel houses have estimated that, at the outside limit, \$15 would have amply sufficed for the construction of each. The same extravagant vein of expenditure runs through the accounts of all the carpenter work performed, and one cannot refer to the bills of the plumber without profound admiration for the system of finance employed for his own personal profit; and it is safe to assert that the Repair Fund has been a "good thing" for all who had a chance to draw upon it.

In January of the present year, owing to the greed of the above mentioned contractors and the wholesale loot of the Repair Fund, the sanitary condition of the hospital was in a deplorable state. The Repair Fund was already overdrawn to the extent of nearly \$1,000. The entire sewer system had been opened up, and the broken and leaky pipes lay exposed in the depths of the yawning trenches. The large conducting sewers situated under the hospital driveway for the conveying of the drainage of the entire hospital into the street main, were broken and uncovered at the bottom of an enormous excavation which occupied the entrance to the reservation. Whatever sewage passed through these pipes failed to reach the street mains, but discharged directly into the excavation. For several weeks all traffic through the front gate was completely blockaded, and as a consequence the rear entrance was necessarily utilized as the only available thoroughfare for teams.

In many of the wards soil pipes had been disconnected and left open and the drainage diverted from its proper channels, so that the total sewage of the hospital was being discharged into the open trenches and in several places directly upon the surface of the ground, where it was continually being absorbed by the soil. The atmosphere reeked with the stench from the open drains; the germ-laden effluvia from the fetid streams which trickled through the ground permeated every department of the hospital, undermining the health of the well and intensifying the distress of the sick.

Your Honorable Board will recollect that a resolution was passed by which the Maternity Ward was closed during the months of January and February, this being deemed an absolute necessity for the purpose of protecting parturient women from the disastrous consequences which would have resulted from their being exposed to the then prevalent elements of danger to life.

On the accession to office of the present Board of Supervisors, speedy steps were at once taken to relieve the conditions above quoted. The members of the Hospital Committee of that Board, Messrs. Dodge, Clinton and Rottanzi (all three, providentially, being intelligent medical men), took in the situation at a glance and put forth energetic efforts to restore the hospital, as far as possible, to a condition fit for habitation. Under their direction the worthless iron-stone pipe, the relics of previous sewer systems, which was lying broken, warped at the joints and filled with eucalyptus undergrowth, was taken up and replaced by cast-iron pipe under

the careful superintendence of Plumbing Inspector Sullivan. As a result of the interest shown by this Hospital Committee, the greater part of the hospital building is now properly drained, and, although much criticism has been directed toward the Plumbing Inspector for his arbitrary action in insisting upon the use of cast-iron as a substitute for iron-stone pipe, the wisdom of such a course is clearly in evidence to any unbiased person who has had the opportunity of inspecting the piping which was removed.

An attempt has been made during the present administration to improve the appearance of the hospital grounds, which during the preceding regime had been notoriously neglected. In order to bring about this improvement, the assistance of Sheriff Whelan was invoked and a request made for the services of a squad of prisoners. The Sheriff responded promptly, and under his orders a number of prisoners were sent over daily for several weeks from Branch Jail No. 2. While this labor was available, many eucalyptus trees, which had hitherto encumbered the grounds, were cut down and sawed into lengths suitable for use in the furnace. Much valuable fuel was thereby obtained, and the removal of these trees not only added materially to the appearance of the reservation, but permitted the entrance of light and warmth into wards previously overshadowed. The fences, outbuildings and substructure of the hospital were thoroughly scraped and whitened, so that by the time the labor of the prisoners was completed the grounds were more cleanly and the general effect more cheerful than at any time for years past.

The hospital, situated as it is in the warmest portion of the city, should, under proper care, have been surrounded by the choicest flowers and shrubbery, climatic conditions being most favorable to their culture. The gardener of the hospital, for lack of assistants and material, had been unable to bring about any decided results in the matter of floriculture. In the early part of the present year he was given two assistants, at an aggregate expense of \$10 per month, and a small amount from the petty fund was expended for seeds and slips. The Park Commissioners were asked to contribute plants and shrubs, and responded liberally. Within the short space of six months fully one-half of the ground in the rear of the hospital, which for many years had been a barren patch of soil, utilized for the reception of all kinds of debris, has been transformed into a charming garden spot, and by the time the summer of 1898 will have arrived the large additional area will have been fertilized and devoted to garden purposes.

The manner in which this hospital has been neglected in the past by municipal authorities is a signal and standing reproach. The capacity of the hospital is the same as when erected twenty-five years ago. Since then the population of the city has doubled, but the annual appropriations have been progressively lessened. In every ward much of the bedding is in tatters and many of the windows uncurtained. The surgical appliances and instruments are in most instances imperfect, of inferior quality, and many of them obsolete. Of late years surgical instruments purchased for the hospital have been of the cheapest grade and entirely unsuited for hospital work; their condition necessitating frequent repair, and very often complete abandonment of their use. The present equipment of instruments in the surgical division of this hospital is emphatically the poorest and most worthless of any institution in San Francisco; and the Visiting Surgeons are frequently compelled to bring to the hospital instruments from their own private collection in order that they may procure satisfactory results in their service.

The hospital is entirely lacking in electrical appliances, two or three old and worn out Faradic batteries constituting the entire outfit. It is therefore an impossibility for the visiting or resident staff to treat in either a scientific or intelligent manner patients requiring the application of electricity. This is a defect which should receive prompt attention and be remedied without delay.

Every first-class hospital in the country has a library connected with it for the use of the resident staff. As a matter of course this hospital has none. There should be, as an integral part of the institution, a complete medical library for

the use and instruction of the resident medical officers. This, however, would probably be looked upon by the guardians of the public treasury as an extravagant luxury, and the mere suggestion of such an un-San Franciscan innovation will no doubt be hailed as heretical and may possibly be instrumental in producing apopleptic attacks among indignant municipal financiers. I make bold, however, to recommend that a certain portion of the annual appropriation for the coming fiscal year be set apart for the purchase of standard medical works to form the nucleus of a library for the hospital.

Much of the work in the hospital could be facilitated were proper electric and telephonic communication established between the executive department and the various wards. Valuable time now lost in the transmission of messages throughout the institution would be saved, and a reduction in the number of minor employees could readily be made. At present a system of signals, handed down from time immemorial is now in use. These signals are made known to the entire hospital by the clanging of an enormous gong which "hath murdered sleep" for many years and has constantly been the cause of disturbing the rest and contributing to the increased discomfort of sick and dying patients. This relic of barbarism should be relegated to the Park Museum as a brazen exhibit of noisy economy as practiced in the City and County Hospital of San Francisco. The placing of a suitable electric bell and telephonic system would entail a comparatively light expense, and would accomplish the elimination of the disagreeable gong system now employed, and I recommend unreservedly that this matter be seriously considered by your Board and an appeal made to the Board of Supervisors to provide for this reform.

Another serious defect marring the efficiency of the hospital is the absence of appropriate quarters to be used as places of resort for patients who are convalescent and able to leave their wards. Such patients are compelled, during inclement weather, either to remain at their bedsides in the wards or to take their exercise in the main corridor, through which the wind frequently blows like a hurricane and where they are not allowed to congregate on account of impeding the movements of the employees. In the interest of humanity a pavilion, partially roofed with glass, should be erected at a short distance from the main building, to which patients could repair and have the benefit of warmth and freedom from the unpleasant surroundings of the wards to which they belong. This pavilion could have separate compartments for male and female patients and could be used at all times during the day as reading and smoking rooms, and the comfort of those privileged to occupy it greatly enhanced. This proposition will undoubtedly call forth condemnation as a tax-eating extravagance and an unnecessary expense to the city; nevertheless, I submit it to your consideration in the hope that you will urge its adoption.

It is a notorious and flagrant fact that the hospital is entirely without facilities for the removal and escape, in case of fire, of patients located upon the upper floors. Only one upper ward of the hospital is provided with means of egress at the rear. The buildings are of frame, old and dry, and without a single fire escape. They are so arranged that were a fire to obtain headway it would sweep through the long corridor, and in a few minutes the entire structure would be completely consumed. Filled, as the hospital is, at all times of the year, with helpless and bed-ridden patients it would be an absolute impossibility to remove them in time to a place of safety, and the loss of life would be appalling. I predict that this catastrophe will surely overtake this hospital at some unexpected moment, and the economists of the city will then have the satisfaction of knowing that through their conservative parsimony a large portion of the city's wards will have been roasted to death, and this tax-burdened municipality relieved for a time of the hospital incubus. Such a magnificent conflagration, with its accompanying holocaust of incineration, would be a gorgeous and lurid demonstration in honor of the perpetuation of the "dollar limit." An additional spasmodic glee and exaltation would in all probability animate

our local Apostles of Retrenchment were some of the "useless employees," so much talked of, included in the sacrificial burnt offering to the tin god "Economy."

Another constant menace to life and property is the worn-out boiler in the engine room. All the tubes are leaky, the back burnt through and an explosion is liable to occur without warning. The twenty-five foot iron smoke stack surmounting the brick chimney has long been in service and has burnt through from top to bottom, and the upper section has fallen of its own weight to such an angle that a reverse draught has been created, and the doubtful efficiency of the entire plant still further minimized. An accompanying photograph serves to illustrate the peculiar position of the smoke stack with relation to surrounding objects.

The laundry is entirely inadequate for the needs of the hospital. The machinery is old and imperfect, necessitating frequent repair, and for this reason the work is perforce hurried and incomplete. Much of the labor is done by hand and the clothing and bedding returned to the wards insufficiently laundered. A steam mangle is imperatively required as a part of the equipment. Furthermore, the space occupied by this department is very limited, and although the laundry force is small, there is not enough room to permit of the proper handling of the washing. The flooring is worn through in the ironing room and the dryer has outlived its usefulness. Another photograph is here submitted, showing the overcrowded condition of the washroom. In a public hospital the provisions for cleanliness should take precedence with skilled medical treatment and proper feeding over all other requirements, but in this hospital the laundry has for years been a bone of contention between Boards of Supervisors and hospital authorities, the Boards of Supervisors invariably triumphing and permitting the laundry to lapse still further in its deterioration until it has reached its present disgraceful stage of decrepitude.

The Training School for Nurses is in active operation, and about thirty pupil nurses are under instruction. Reference to the report of the Principal of the Training School will indicate the methods pursued in the conduct of the school and the quality of work carried out under its auspices. This division of the hospital had been neglected through indifference on the part of the last administration, and the lecture course discontinued through lack of sufficient effort to maintain it. The discipline of the school was seriously affected and its organization imperiled. Radical treatment of certain disturbing elements in the personnel of the school, the delegation of proper authority to the Principal, and the re-establishment of the course of lectures, have militated toward its improvement, and at the present time the services performed by its pupils in the different wards of the hospital are worthy of commendation. Your attention is again directed to the report of the Principal of the Training School, setting forth the many disadvantages under which it is conducted. The number of pupils is too small for the amount of work required of them, and the living apartments of the nurses are totally inadequate. A study of the comparative table embodied in the Principal's report will show this hospital to be the most scantily supplied with nurses of any on the list; the average in the principal hospitals to which Training Schools are attached is four patients to each nurse, while in this hospital the number assigned to the care of a pupil nurse averages fourteen. This paucity of nurses will, beyond doubt, meet with the approval of the "economists," but it imposes excessive labor upon the nurse and prevents the sufficient attention being given to patients. The number of nurses could be doubled at a nominal expense with material gain to the efficiency of the hospital, but under the present circumstances accommodations are so limited that the plan will be impracticable.

The report of the Steward states in detail the expenses of the hospital for the past year. Under the present administration the directions of the visiting staff as to diet and medicines have been carried out, and no attempt has been made to curtail their orders. It has been assumed, and with perfect justice, that the members of the visiting staff are sufficiently intelligent to recognize the needs of

the patients entrusted to their care, and any action on the part of the executive department of the hospital tending to alter or abridge the orders for food or medicines issued by them is a direct insult to their skill and an injustice to the patients. The methods pursued in some of the previous administrations of arbitrarily changing the diet sheets and prescriptions of the Visiting Staff are to be condemned as reprehensible and deserving of censure. Subsistence could readily be limited and reduced to the standard of Dotheboys Hall, were lard to be used instead of butter; were the variety of molasses, known as "Black Strap," to be furnished instead of sugar; water given in lieu of milk, and medicines juggled with in proportion. At the present time these substitutions are not practiced, and the yearly expense has consequently been greater than would meet with the approval of persons who are more interested in reducing the tax levy than in alleviating the sufferings of their fellow-men.

The statements of Superintendent Physician Titus in his last annual report concerning the difficulties of preserving proper discipline in the hospital, owing to the failure on the part of the appointing power to vest the executive officer with proper authority over his subordinates, strike emphatically the key note of hospital mismanagement. No Superintendent can properly administer the affairs of an institution of which he is presumed to have control, unless those under him recognize that his authority is unquestioned and that his rulings will receive the undivided support of the administrative Board. The misfortune of this hospital has been that every subordinate officer and employee considered his or her tenure of office, not conditional upon the faithful performance of duty, but as dependent only upon favoritism of some particular member of the Board of Health, or upon the exercise of a "pull" with the prevailing political faction. Whenever an employee is privileged to go behind the dictum of his superior officer and appeal to the higher authority, the discipline of the institution in which he is a servant is surely and irreparably undermined.

Under the present system of double government the Board of Health is possessed of limited power. It can only appoint the officers and employees of the hospital and regulate their salaries, the disposition of all other expenditures being relegated to the Board of Supervisors. The Superintendent Physician of the hospital consequently occupies an unenviable position. He is compelled to await the pleasure of the Hospital Committee of the Board of Supervisors in matters appertaining to the purchase of all necessary supplies, such as subsistence, drugs and surgical instruments. Should the members of this committee feel disinclined to honor requisitions, no matter how urgent the necessity may be, the hospital is thereby deprived correspondingly. The administration of the hospital is then open to public criticism, and accusations of neglect and indifference are made against the executive officer, and the Board of Health, who appointed him, held culpable for his derelictions, while the Supervisors who may be to blame for such condition of affairs are free from unfavorable comment.

The Superintendent Physician is held responsible for all expenditures from the hospital appropriation, but at the same time has no voice in the awarding of contracts, in the correction of overcharges, nor in any particular can he regulate the disposition of the hospital funds. It is a matter of record that during the last administration bills for non-contract work amounting individually to more than \$500 have, contrary to law, been presented to this hospital and approved by the Supervisory Committee. During the month of December, 1896, plumbing bills from one firm, aggregating more than \$2,600, were presented, approved and paid. The letter of the law, however, was adhered to inasmuch as each bill called for a smaller amount than \$500, but the spirit of the law was outrageously violated, as all these bills were evidently intentionally divided into smaller sums in order to avoid detection. As already stated, this money was paid, but all the hospital received in return were the open trenches and the disconnected plumbing mentioned elsewhere.

The law evidently presumes that Boards of Health are incompetent, mentally and morally, to manage the expenditures of eleemosynary institutions, and therefore confers such responsibility upon the laity. The present fortunate circumstances of having a Hospital Committee of the Board of Supervisors, composed entirely of medical men, is an accident not liable to occur again in the history of San Francisco, and the harmony existing at the present time between this committee and your Board will not be transmitted as a heritage to your and their successors. So long as this double government prevails, scandals of administration are unavoidable; and the direction of hospital affairs should be relegated to one governing body, having absolute power over its finances as well as the regulation of the conduct of its officers and employees. This can be best accomplished by the organization of a Board of Charities, composed equally of reputable physicians and honest laymen, the members of this conjoint commission to be appointed by the Mayor of the city, who as a rule will make judicious selections. When this idea is perfected and brought to an issue the City and County Hospital can be so conducted as to be a credit to the city.

The action of your Board in requiring certain officers and employees to be uniformed according to their rank, has been productive of good results and has contributed to the improvement of discipline as well as personal appearance.

With a view to increasing the comprehensiveness of the statistical portion of this report a number of diagrams have been prepared. Several of these demonstrate the percentage of mortality due to certain diseases. It will be seen that out of the total of 504 deaths occurring during the last fiscal year, 23 resulted from pneumonia, 39 from cancer, 68 from diseases of the heart, while tuberculosis heads the list with 147. The fact that 30 per cent of the entire mortality of the hospital is due to tubercular disease is a sufficiently strong argument as to its prevalence and the necessity of controlling its spread by suitable municipal and State legislation.

I regret to state that there is no question but that a considerable proportion of the cases of tuberculosis treated in this hospital are directly resultant from association in the wards with other patients suffering from this disease. The records of the hospital show that patients who have been treated for bronchial and other complaints have re-entered the hospital, having become, in the meantime, the victims of tuberculosis contracted during their previous residence in the wards. The visiting and resident staff will vouch for the truth of this assertion, and can refer directly to cases which have come under their immediate observation. Although the effort is made to isolate the patients who are suffering from this form of disease, yet, owing to the lack of sufficient accommodations in other portions of the hospital, other cases must necessarily be admitted to the same wards.

That this hospital, instead of being a resort for the relief and cure of disease, has become a hot bed for the culture of tubercle bacilli, and is continually serving as a focal point for the dissemination of tubercular infection, is a crime which can be laid at no other door than that of the city government, which at all times has been apathetic if not actually antagonistic to any measure intended to reform the present imperfect and insufficient apology for a public hospital.

"The primary function of hospitals is the successful treatment of diseases and accidents in the strictest relation to the interests and advantages of the sick and stricken individual. To this all other relations, scientific and administrative, must be absolutely subordinated in spite of the wide-spread popular belief to the contrary."

This quotation from the report of a prominent Eastern hospital authority should serve as a cardinal text for the guidance and instruction of those upon whom the responsibility of conducting public hospitals devolves. A hospital is not to be considered as a paupers' retreat, but as a shelter for the common people temporarily disabled, where under the treatment of skilled physicians and educated nurses they may be restored in the shortest possible time to health and a wage-earning capacity, and thus rendered independent of public charity.

There has, apparently, been little effort on the part of previous administrations to compile and collate, for the benefit of the medical profession, the data relative to the vast amount of medical and surgical material cared for every year in the wards of this hospital. Observation of the annual reports for the past twenty-five years shows that up to the presentation of this report an antique and unsatisfactory system of alphabetical classification of diseases has been in use. Statistics rendered in such a manner are of no value to the reader, and their insertion in the body of any report simply adds to the bulk and detracts from its worth. In the preparation of this report considerable care has been taken to classify the different diseases, for which patients have been admitted, in such a manner as to constitute a comprehensive and intelligent resume of the year's work. Although this classification may be imperfect in some respects, yet it establishes a plan which, if followed out and improved upon during the coming year, will result in a thoroughly reliable and complete tabulation of diagnoses in the next annual report.

Notwithstanding the great quantity and variety of clinical and pathological material handled yearly by the hospital staff, the annual reports of the hospital have hitherto contained no records or histories in elaboration of interesting cases. This is in marked contradistinction to the custom of the large hospitals in the East and in Europe, the annual reports of which always contain valuable information in addition to bare statistics. I would recommend that the Board appoint an official Pathologist, under suitable salary, to be attached to this hospital, whose duty it shall be to assume charge of all pathological specimens, post-mortem and otherwise, to examine the same and to report in full the result of his investigations to the Superintendent Physician; such results to be compiled and to form part of the annual report of the hospital.

In conclusion I might venture to suggest that in recommending improvements of the hospital, in the matter of new buildings and the repair of the present structures, time may possibly have been wasted, as many of these buildings are practically beyond repair and any attempt to place the plant in suitable condition would result in an unwarranted and enormous outlay of money. To sum up briefly, there is little to commend and much to condemn. The City and County Hospital is simply an aggregation of buildings, inadequate in size, insufficient in arrangement, and rotten by reason of their great age. At the time they were built they were intended as a temporary expedient for hospital purposes. They have been allowed to remain in their present situation until they are rapidly falling to pieces from decay. For a quarter of a century they have served as a refuge for every known form of disease. They are saturated with filth and impregnated with germs. They are a menace to the health of the community in which they are located. They are a disgrace to civilization and an ulcer upon the municipality. They give the lie to our boasted Western generosity, and have perverted a public charity into a public nuisance. They cannot be improved; they cannot be reconstructed. Their further continuance is a crime against humanity, and in the interest of the common good they should be abandoned and demolished. I unreservedly and unhesitatingly recommend the speedy condemnation and utter demolition of the present City and County Hospital, and the erection in its stead of a new structure, modern in its design, intelligent in its conception, scientific in its appliances, and one to which the city and State may point with pride and not with shame.

Respectfully submitted,

JOHN M. WILLIAMSON, M.D.
Superintendent Physician.

YEARLY SUMMARY

MEDICAL AND SURGICAL DISEASES.

MEDICAL DISEASES.

CLASSIFIED ACCORDING TO THE NOMENCLATURE OF DISEASES, AS PUBLISHED BY THE
ROYAL COLLEGE OF PHYSICIANS OF LONDON, AND AMERICAN
MEDICAL ASSOCIATION.

FROM JULY 1, 1896, TO JUNE 30, 1897.

DISEASES.	In Hospital July 1, 1896.	ADMITTED.			DISCHARGED.					Remaining in Hospital June 30, 1897.
		Male.....	Female.....	Total.....	Cured.....	Improved.....	Unimproved....	Died.....	Total.....	
ACUTE GENERAL INFECTIOUS FEVERS.										
Typhoid fever.....		30	5	35	19	1	12	32	3
With tuberculosis pulmonalis.....		1	1	1	1
Intermittent malarial fever.....	2	122	4	126	96	22	5	123	5
Irregular.....		1	1	1
With lumbago.....		1	1	1	1
With angioma.....		1	1	1
Chronic.....		4	4	2	2	4
Remittent fever.....	1	8	8	8	1	9
Scarlet fever.....		1	1	1	1
Influenza.....	3	10	4	14	15	2	17
Measles.....		14	14	14	14
Erysipelas.....		18	18	17	1	18
Traumatic.....		1	1	1	1
Pseudo-erysipelas.....		1	1	1	1
Varicella.....		1	1	1	1
DIATHETIC DISEASES AND DISEASES OF NUTRITION.										
Articular rheumatism, Acute.....	11	87	12	99	62	35	1	1	99	11
Acute, with pneumonia.....		1	1	1	1
Acute, with senility.....		1	1	1	1
Subacute.....		1	1	1	1

MEDICAL DISEASES—CONTINUED.

DISEASES	In Hospital July 1, 1886.	ADMITTED.			DISCHARGED.					Remaining in Hospital June 30, 1887.
		Male.	Female.	Total.	Cured.	Improved.	Unimproved.	Died.	Total.	
Carcinoma—Concluded.										
Of superior maxilla.....		1	..	1	1
Of inferior maxilla.....		2	..	2	1	..	1	..	2	..
Epithelioma of tongue.....		1	..	1	1	..	1	..
Alveolar abscess.....		2	..	2	1	1	2	..
Abscess of lower maxilla.....		1	..	1	1	1	..
Ulceration of tooth.....		1	..	1	1	1	..
Coryza.....		..	1	1	1	1	..
Glossitis.....		..	1	1	1	1	..
Ranula.....		..	1	1	..	1	1	..
Cleft palate.....		1	..	1	1	1	..
Nasal catarrh.....		1	..	1	1	..	1	..
OF THE TONSILS.										
Tonsillitis, acute.....		10	6	16	9	6	1	..	16	..
Syphilitic.....		1	..	1	1	..	1	..
OF THE LARYNX.										
Acute laryngitis.....		..	4	4	3	1	4	..
Laryngeal tuberculosis.....		..	1	1	..	1	1	..
OF THE BRONCHI.										
Acute bronchitis.....	6	27	10	47	28	17	4	1	50	3
With tuberculosis pulmonalis.....		1	..	1	..	1	1	..
With pleurisy.....		1	..	1	..	1	1	..
With asthma.....		1	..	1	..	1	1	..
With emphysema.....	1	1	..	1	1	1	2	..
Sabacute bronchitis.....	1	1	..	1	1	1	2	..
Chronic bronchitis.....	1	16	2	12	4	8	12	1
With emphysema.....		1	..	1	1	1	..
Capillary bronchitis.....		1	..	1	1	1	..

MEDICAL DISEASES—CONTINUED.

DISEASES.	In Hospital July 1, 1886.	ADMITTED.			DISCHARGED.						Remaining in Hospital June 30, 1887.
		Male.....	Female.....	Total.....	Cured.....	Improved.....	Unimproved...	Died.....	Total.....		
Septic bronchitis.....		1		1						1	
Bronchorrea.....		1		1				1	1		
Asthma, acute.....	1	34	5	39	9	24	1	2	36	4	
With malaria.....		1		1	1				1		
With dilatation of heart.....			3	2				2	2	1	
With cardiac degeneration.....	1				1				1		
With opium habit.....		1		1						1	
Subacute asthma.....		1		1	1				1		
Chronic asthma.....			1	1		1			1		
OF THE LUNG.											
Congestion of the lung.....	1	1		1				2	2		
Broncho-pneumonia.....		3	1	4	4				4		
Abcess of lung.....		3		3	1	1			2	1	
Lobar pneumonia.....	4	49	6	55	30	6	1	20	57	2	
Double.....		5		5	1			4	5		
With tertiary syphilis.....		1		1		1			1		
With mitral incompetence.....		1		1						1	
With ulcer of leg.....		1		1		1			1		
With bronchitis.....		1		1		1			1		
With erysipelas.....		1		1						1	
Hypostatic pneumonia.....		2	4	6			2	4	6		
Acute miliary tuberculosis.....		4		4				4	4		
Tuberculosis pulmonalis.....	39	212	51	263	3	57	31	131	262	40	
Incipient.....		2		2		1			1	1	
With pleurisy.....	1	2		2				2	2	1	
With tubercular peritonitis.....		1		1				1	1		
With spondylitis.....		1		1				1	1		
With syphilis.....		1		1				1	1		
With ischio-rectal abscess.....	1					1			1		

MEDICAL DISEASES—CONTINUED.

DISEASES.	In Hospital July 1, 1896.	ADMITTED.			DISCHARGED.				Remaining in Hospital June 30, 1897.
		Male.	Female.	Total.	Cured.	Improved.	Unimproved.	Died.	Total.
Tuberculosis pulmonalis—Concluded.									
And rectal		3		3				2	2
With epilepsy		1		1					1
With chronic gastritis.....			1	1					1
With traumatic synovitis of knee.....		1		1					1
Cirrhosis of the lung.....		1		1					1
Gangrene of the lung.....		1		1				1	1
Emphysema		9	1	10	1	7	2		10
OF THE PLEURA.									
Hydrothorax and lobar pneumonia.....		1		1				1	1
Pleurisy, acute	2	26	1	27	17	8		4	26
Pleurisy and bronchitis		1		1	1				1
Pleurisy, dry		1		1		1			1
Traumatic		1		1	1				1
Subacute, with effusion.....		2	3	5	1	1		2	4
Subacute, with pneumonia.....		2		2	1			1	2
Subacute, with congestion of lung.....		1		1				1	1
Empyema	2	5	1	6	1	1		5	7
With gangrene of lung			1	1				1	1
Pleuritic adhesions.....		1		1		1			1
DISEASES OF THE CIRCULATORY SYSTEM.									
OF THE HEART AND ITS MEMBRANES.									
Acute pericarditis.....		2		2				1	1
With pleuritis.....		1		1				1	1
Chronic pericarditis.....		1		1		1			1
Senile heart.....		4		4		1		2	3
Fatty degeneration of heart.....	1	3	1	4		2		3	5
Dilatation of heart.....	1	5		5		5		1	6

MEDICAL DISEASES—CONTINUED.

DISEASES.	In Hospital July 1, 1893.	ADMITTED.			DISCHARGED.					Remaining in Hospital June 30, 1897.
		Male.	Female.	Total.	Cured.	Improved.	Unimproved.	Died.	Total.	
Dilatation of heart—Concluded.										
With cirrhosis of liver.....		1		1				1	1	
With asthma.....		1		1				1	1	
With atheroma of arteries.....		1		1		1			1	
Lipomatosis of heart.....	2	2	3	5		6		1		
With effusive pleurisy.....			1	1				1	1	
Tachycardia.....		1		1		1				
Valvular disease (unclassified).....	6	18	15	33		17	2	19	38	1
With tuberculosis pulmonalis.....		1		1				1	1	
Mitral incompetence.....	3	35	7	42		24	1	17	42	3
And double aortic.....		1		1		1			1	
With pleurisy.....		1		1				1	1	
Mitral stenosis.....		1	2	3		3			3	
Aortic incompetence.....		8		8		3	1	3	7	1
With asthma.....		1		1		1			1	
With cirrhosis of liver.....		2		2		1		1	2	
Mitral and aortic incompetence.....	1	3		3				4	4	
Aortic stenosis and mitral incompetence.....		2	2	4		4			4	
Aortic and mitral stenosis.....		2	1	3		1			1	2
Muscular incompetence of heart.....		1		1				1	1	
Embolism, following thrombosis of femoral vein.....		1		1				1	1	
Angina pectoris.....	1	1		1		2				
OF THE BLOOD VESSELS.										
Atheroma, general.....	1									1
With effusion into lateral ventricles.....		1		1				1	1	
Of coronary arteries.....		1		1				1	1	
Aneurism of ascending aorta.....		2		2				2	2	
Of arch of aorta.....		2		2				1	1	1

MEDICAL DISEASES—CONTINUED.

DISEASES.	In Hospital July 1, 1896.	ADMITTED.			DISCHARGED.					Remaining in Hospital June 30, 1897.
		Male.	Female.	Total.	Cured.	Improved.	Unimproved.	Died.	Total.	
Aneurism—Concluded.										
Of abdominal aorta.....		1		1				1	1	
Of thoracic aorta.....		1		1						1
Of carotid artery.....		1		1		1			1	
Of aorta.....		1		1		1			1	
Rupture of aortic aneurism.....		1		1				1	1	
Dilatation of aorta.....		1		1				1	1	
Aneurismal varix and chronic Parenchymatous nephritis.....		1		1						1
Phlebitis.....		2	3	5	2	3			5	
With popliteal thrombosis.....		1		1		1			1	
Varicose veins.....	2	9	1	10	6	3	1		10	2
Senile gangrene.....		1		1				1	1	
OF THE BLOOD.										
Leukæmia.....		1		1				1	1	
Septicæmia.....		3	1	4				4	4	
Following periurethral abscess.....		1		1				1	1	
Anæmia.....		1	2	3		2			2	1
Peruiculous.....		1		1			1		1	
Following sarcoma of neck.....		1		1						1
Pyæmia.....		1		1	1				1	
With tubercular knee joint.....		1		1				1	1	
With tuberculosis of knee.....		1		1				1	1	
DISEASES OF THE LIVER, ETC.										
Congestion of liver.....		3	3	6	6				6	
Cirrhosis of liver.....	1	11	3	14		3	1	11	15	
With ascites.....		1		1				1	1	
With hypostatic pneumonia.....		1		1				1	1	

MEDICAL DISEASES—CONTINUED.

DISEASES.	In Hospital July 1, 1896.	ADMITTED			DISCHARGED.				Remaining in Hospital June 30, 1897.
		Male.....	Female.....	Total.....	Cured.....	Improved.....	Unimproved.....	Died.....	Total.....
Cirrhosis of liver—Concluded.									
With valvular disease of heart and pneumonia.....		1		1				1	1
Tubercular.....		2		2			1	1	2
Carcinoma of liver.....	1	3	3	6			1	6	7
Hepatic abscess.....	1	2	1	3			1	3	4
Cholelithiasis.....		1	1	2		1			1
Catarrhal jaundice.....		3		3	2	1			3
DISEASES OF THE THYROID.									
Exophthalmic goitre.....	1	1		1		1			1
Myxœdema.....		1		1					1
DISEASES OF THE DIGESTIVE ORGANS.									
OF THE ŒSOPHAGUS.									
Tuberculosis of œsophagus with stenosis.....			1	1				1	1
Carcinoma of œsophagus.....			1	1				1	1
Stricture of œsophagus.....			5	5		4			4
Ulceration of œsophagus into aorta.....		1		1				1	1
OF THE STOMACH.									
Gastritis, acute.....		24	1	25	14	10	1		25
Subacute.....		11	4	15	9	6			15
Subacute with hysteria.....			1	1	1				1
Chronic.....	3	20	1	21	5	12	4	1	22
Gastric catarrh.....	2	13	11	24	22	3			25
Gastralgia.....				3	2	1			3
Gastric ulcer.....	1	6		6	2	1	1	3	7
Dilatation of stomach.....				1			1		1
Carcinoma of stomach.....	1	9		9		1	1	7	9
Catarrh of stomach and alcoholism.....		1		1		1			1

MEDICAL DISEASES—CONTINUED.

DISEASES.	In Hospital July 1, 1896.	ADMITTED.			DISCHARGED.					Remaining in Hospital June 30, 1897.
		Male.	Female.	Total.	Cured.	Improved.	Unimproved.	Died.	Total.	
Dyspepsia, acute		1		1	1	1			1	
Atonic.....		1		1						1
Chronic		1		1	1	1			1	
Gastro-enteritis.....		2	1	3	1	1		1	3	
Gastro-intestinal catarrh.....		1		1	1				1	
Gastro-duodenal catarrh and ischio-rectal abscess.....		1		1	1				1	
Carcinoma of pylorus.....		1		1				1	1	
OF THE INTESTINES.										
Enteritis		1		1	1				1	
Catarrhal.....			2	2	1		1		2	
Ulceration of intestines.....		1		1				1	1	
Constipation, acute.....		4	3	7	4	3			7	
With neurasthenia		1		1	1	1			1	
Diarrhœa		6	1	7	6				6	1
Dysentery, acute.....	1	5	1	6	3	3			6	1
Chronic		3	1	4	1			2	3	1
Proctitis.....		2		2	1	1			2	
Colitis			1	1	1				1	
Colic	2				2				2	
Typhlitis.....	1				1				1	
Carcinoma of duodenum		1		1				1	1	
Carcinoma of rectum.....	1	2	1	3		1	1	1	3	1
Carcinoma of sigmoid flexure.....		1		1				1	1	
Paralysis of sphincter ani		1		1	1				1	
OF THE PANCREAS AND SPLEEN.										
Carcinoma of the pancreas.....		3		3	1			2	3	
Carcinoma of the spleen.....		1		1				1	1	
Hypertrophy of the spleen.....			1	1		1			1	

MEDICAL DISEASES—CONTINUED.

DISEASES.	In Hospital July 1, 1896.	ADMITTED.			DISCHARGED.					Remaining in Hospital June 30, 1897.
		Male.	Female.	Total.	Cured.	Improved.	Unimproved.	Died.	Total.	
OF THE PERITONEUM.										
Peritonitis, acute.....		4	4	8	2	1		3	6	2
Chronic.....		1		1				1	1	
Pelvic.....			3	3	1		2		3	
Tubercular.....		1		1	1				1	
With bronchitis.....			1	1						1
Due to ulceration of uterus.....			1	1				1	1	
From perforation of intestine.....		1		1				1	1	
Following strangulated femoral hernia.....			1	1				1	1	
Pelvic and valvular disease of heart.....			1	1				1	1	
Ascites (cause not stated).....		1		1			1		1	
DISEASES OF THE KIDNEY, BLADDER, ETC.										
Parenchymatous nephritis, acute.....		12	2	14	1	7	1	5	14	
With pneumonia.....		1		1				1	1	
Chronic.....		3	5	8	2	2		3	7	3
Interstitial nephritis.....		2	17	19		9	1	7	17	3
With diabetes mellitus.....		1		1						1
With tuberculosis pulmonalis.....		1		1				1	1	
Laceration of kidney.....		1		1	1				1	
Sarcoma of kidney.....		1		1				1	1	
Floating kidney.....			1	1			1		1	
Pyelitis.....			1	1				1	1	
Abscess of kidney.....		1		1				1	1	
Perineal.....		1		1	1				1	
Periurethral.....		1	1	2	2				2	
Cystitis, acute.....		11	4	15	4	8	2	1	15	
With prostatic hypertrophy.....		1		1				1	1	
With old stricture.....		1		1		1			1	
Chronic, with uræmia.....		1	6	7	1	4		2	7	

MEDICAL DISEASES—CONTINUED.

DISEASES.	In Hospital July 1, 1896.	ADMITTED.			DISCHARGED.					Remaining in Hospital June 30, 1897.
		Male.....	Female.....	Total.....	Cured.....	Improved.....	Unimproved.....	Died.....	Total.....	
Cystitis—Concluded.										
Purulent		1		1						1
Tuberculosis of bladder and urethra.....		1		1				1	1	
Carcinoma of bladder.....		1		1		1			1	
Procedentia of bladder			1	1			1		1	
Irritable bladder.....		2		2	1	1			2	
Calculus, renal.....		1		1		1			1	
Vesical.....		1		1		1			1	
Urinary.....	1							1	1	
Prostatitis, acute.....		1		1		1			1	
Retention of urine.....	1					1			1	
Chronic.....		1		1		1			1	
Suppression of urine.....		1		1	1				1	
Uremia.....		3		3				3	3	
Rupture of urethra.....		2		2	1			1	2	
Papilloma of urethra.....			1	1	1				1	
Stricture of urethra.....	3	24		24	11	11	2		24	3
With multiple fistula.....		1		1						1
With urinary fistula.....		1		1	1				1	
Spasmodic.....		1		1		1			1	
Prostatic stricture.....		1		1			1		1	
Enlarged prostate glands.....		2		2		1	1		2	
Hypertrophy of prostate glands.....		1		1	1				1	
Urinary fistula.....		2		2		1	1		2	
Abdominal.....	1				1				1	
Hematuria.....		1		1		1			1	
DISEASES OF THE NERVOUS SYSTEM.										
OF THE BRAIN.										
Cerebritis			1	1				1	1	

MEDICAL DISEASES—CONTINUED.

DISEASES.	In Hospital July 1, 1896.	ADMITTED.			DISCHARGED.						Remaining in Hospital June 30, 1897.
		Male.	Female.	Total.	Cured.	Improved.	Unimproved.	Died.	Total.		
Cerebral softening.....			3	3				3	3		
Cerebral hemorrhage.....	3	7	4	11	1	6		2	9	5	
Cerebral meningitis.....		1	1	2				2	2		
Syphilitic.....		2		2				1	1	1	
Meniere's disease.....		2		2		1	1		2		
Hemiplegia.....		18	4	22	2	6	5	4	17	5	
With hypostatic pneumonia.....		1		1				1	1		
Syphilitic.....		1		1		1			1		
Paraplegia.....	1	6		6		5	1		6	1	
Vertigo.....		1		1	1				1		
Senile paralysis.....		2		2			1	1	2		
OF THE SPINAL CORD.											
Spinal meningitis.....			1	1		1			1		
Spinal paralysis.....		1		1		1			1		
Lateral sclerosis of cord.....		1		1		1			1		
Myelitis.....		1		1				1	1		
Transverse.....		1		1				1	1		
Chronic.....		1		1						1	
Locomotor ataxia.....	1	12		12		7	1	1	9	4	
Hæmatoma of spinal cord and fracture of astragalus.....		1		1	1				1		
OF THE NERVES.											
Neuralgia.....		2	1	3		1	1		2	1

REPORT OF STEWARD.

San Francisco, July 1, 1897.

John M. Williamson, M. D., Superintendent Physician—

Dear Sir: The annual statement of expenditures accompanying this, the Steward's yearly report, shows that the City and County Hospital of San Francisco has been conducted for twelve months for \$81,029.79, or an average of \$6,752.48 per month, leaving aside the \$13,718.36 charged to special repairs. The amount would have been still less, and there would probably have been the necessity of closing the hospital for two months, had not the progressive members of the present Board of Supervisors come to the rescue and did what was possible to rectify the errors of their predecessors.

While the fact that a hospital with an average of nearly 400 patients was carried on for this amount of money may appear to be a master stroke from a financial point of view, it is, from a humanitarian standpoint, a circumstance that forms a blot of disgrace on the history of San Francisco. This story of how one of the largest public hospitals in the United States has been conducted with less than half the amount of money expended for the maintenance of even smaller institutions of the same kind, is one that reflects discredit on San Francisco and on the officials who were responsible for the meagerness of the hospital appropriation for the fiscal year just closed. The poor people of San Francisco, who have no other refuge when sickness incapacitates them, are the ones who have suffered by this "master-stroke of finance"—a phrase which sounds much better than inhuman parsimony.

As the literary flights of the hospital Steward must perforce be brief, owing to the expense of printing annual reports, I will make the general statement that the appropriations of the past have been entirely inadequate, and that every effort should be made to secure a sufficient amount for the coming fiscal year. Contract prices are higher this year than last, which is a reason not to be overlooked among the many others for securing a larger appropriation.

Since the 1st of January, when the present administration took charge of the hospital, strenuous efforts have been made to improve the condition of the institution and promote the comfort of the patients and employees. These efforts have been remarkably successful, considering the masterfulness of the financial stroke previously spoken of, the terribly dilapidated condition of the hospital structure, and the state of disorder that pervaded the grounds. The hospital painter, with what material the aforesaid "masterful-stroke" would permit of us purchasing, has improved the appearance of many portions of the interior. The gardener, by energetic and intelligent effort, has placed the grounds in a cleanly condition and beautified them by growing flowers where formerly was only dry grass or dust patches. The carpenter, engineer and other employees have added their quota of effort with the result that there is a notable improvement all around, though all of these employees have been handicapped and disheartened by a lack of material and tools, which lack was occasioned by a still greater lack of money.

Day after day during the year just passed nurses and doctors and other attaches have applied for necessary articles, and have been turned away weary and disappointed with the answer that the articles needed could not be supplied. All over the building the worn or broken furniture, dishes and utensils, carpetless floors, raggedly-curtained windows and makeshift appliances of all kinds attest the pov-

erty of an institution which, above all others, should be kept in spotless condition and abreast of the times in all respects, not only in justice to the city in which it exists, but to the destitute human beings who, in illness, find it their only place of shelter, and trust their lives within its portals.

At one time during the last six months it is an actual fact that nurses had to await their turn to eat because of a shortage of table ware. In several of the wards long rows of broken bottles graced the commodes, it being necessary to use them for sputum cups. Many similar instances of the barbarous poverty that make the San Francisco City and County Hospital a laughing stock abroad could be mentioned, but space will not permit.

I am sorry to note that, in their bitter murmurings against the wrong that is done them, the hundreds of poor who come and go cast some blame upon the present Board of Supervisors, which is an injustice that should be noted. The present Board is, of course, innocent of any errors made by its predecessors, and contrary to any desire to perpetuate this condition of affairs, its members seem to feel that steps must be taken to do away with the disgrace that exists. Appearances indicate that a brighter day is about to dawn for this asylum of the sick, and that it will be lifted by the present Board from the slough of despond into which it has been plunged by past masters of finance.

One of the steady aims of the present management has been to improve the food of the patients. While it is not yet, in the cases of the very sick people, all it should be, owing to the baneful shadow of the "master-stroke," it is greatly improved. The quality is better and the quantity greater. The same kind of meat, milk, butter, eggs and other supplies that goes to the officials and employees goes also to the patients. There is no difference and no distinction.

Your familiarity of the many needs of the hospital makes it unnecessary to go into details on that subject. I will simply say that they are many and urgent.

Labor is done a great injustice at the hospital. Owing to the insufficiency of funds it is impossible to pay the ward-tenders, who keep the buildings clean, more than \$5 per month each, and it is impossible, of course, to make patients work. There should be enough money to hire responsible men at fair wages to do this work. Labor has long ago entered its protest against this system of slavery.

Had the \$14,718.36 appropriated during the year past been properly expended there would have been a different tale to tell of the hospital's condition, though all the money in the city's vaults could not make the old death trap a thoroughly proper home for the sick. It cost the present administration \$3,795.09 to repair the damage incident to the corrupt expenditure of the \$10,923.27 that melted in the hands of the past one, and for which there was nothing to show but gaping trenches, disconnected sewers, some kalsomining daubed on a few wards as if it had been squirted out of a hose, and a few dollars' worth of carpenter work. Had the whole \$95,748.15 been expended for the maintenance of the hospital the battle to keep it open would not have been so hard.

I would recommend that a regularly paid carpenter be added to the list of employees, as there is great need each day for such a mechanic.

Respectfully,

PAUL EDWARDS, Steward.

REPORT OF MATRON.

San Francisco, July 1, 1897.

John M. Williamson, M. D., Superintendent Physician—

Dear Sir: I respectfully submit our yearly report, at your request, but regret it is not more accurate. It has been impossible to make it more so, as we had, you will remember, no supplies in our possession from July 1, 1896, to January 1, 1897, only daily receiving from the Steward, Mr. Robinson, such material as was required to be manufactured, worked, or in some manner prepared for use in the hospital. From January 1st to June 30, 1897, I think everything will be found correct, as during that time all supplies used in my department have been in my possession, received in bulk from the Steward, Mr. Paul Edwards, and duly receipted for.

I am unable to furnish a correct statement of all articles manufactured or sewed in our department as requested, such as the hemming of tablecloths, bedspreads, napkins, screens, window curtains, window shades, meal cloths, and numberless other things made, of which there is no record made, and which would require a great deal of time and labor in the manufacture.

I hope my report will call your kindly attention to the vast amount of sewing done in the Matron's department, and the advisability of providing a water-motor for the sewing machines as a matter of health.

Respectfully,

MARY E. BLACK, Matron.

REPORT OF TRAINING SCHOOL.

San Francisco, July 1, 1897.

John M. Williamson, M. D., Superintendent Physician—

Dear Sir: In submitting this brief history of the San Francisco Training School for Nurses, together with a report of the work done since its organization, it is my earnest desire to call your attention to the present entirely inadequate sleeping and living apartments assigned to the nurses.

Nurses, as human beings and women, have the same tastes as other women, and after spending so much time with the sick should have the benefit of cheerful surroundings when off duty; instead of this our nurses eat and sleep in the hospital atmosphere with its medley of odors, where conditions to maintain health do not exist. An inexpensive temporary frame structure erected on a distant part of the hospital grounds, a library not necessarily large, and a piano, would be much appreciated by the nurses who, despite the many drawbacks and discomforts met with, have given most faithful and willing service to the patients of the hospital.

To raise the standard of our school I would suggest that we follow the example of other large hospitals, by increasing our term of training from two years to that of three years, and exacting a High School education as the minimum limit of educational advantages for the admission of candidates. I would also suggest that the Night Superintendent of Nurses, as well as the head nurses of departments be graduate nurses, as it will materially improve the efficiency of the service. A graduate nurse has been placed in charge of the General Operating Room, having care of all surgical instruments, dressings, etc., and is held responsible for the same. In nine wards a senior nurse is placed in charge of each ward during the day. The night staff of nurses takes entire charge of all patients in the entire thirteen wards, the four male nurses of the surgical wards being then relieved from duty.

The hospital averaging 360 patients of all classes of medical, surgical and obstetrical cases, the pupils consequently have a wide and varied service in the wards and operating room—an invaluable and all-round training such as few other hospitals can offer and none excel.

Commencement exercises of the class of 1895-96 were held in the Occidental Hotel parlors, December 10th, Rev. D. O. Kelley presiding. Appropriate addresses to the nurses were delivered by the Rev. W. H. Moreland; R. Beverly Cole, A. M., M. D., M. R. C. S. E., President of the American Medical Association; and Dr. C. N. Ellinwood. The presentation of the medals and diplomas was made by Dr. Henry H. Hart, Chairman of the Hospital Committee of the Board of Health. The orchestra of the 1st U. S. Infantry of Angel Island, furnished an excellent musical program, supplemented by a charming cornet solo by Mr. John Frehner and clarinet solo by Mr. Donald Graham.

During the past six months many needed improvements have been introduced in the nursing department, though the hospital and operating room still lack proper equipment. Constant makeshifts and improvised methods render the work difficult.

During the present year a lecture and class room has been fitted up in the executive building. Previous to April, 1897, the pupils had met in the corridor of the nurses' quarters for study and lectures. In March, 1897, a male pupil was admitted to the Training School, there being, I believe, but two other hospitals in the United States where the provision is made for the training of male nurses.

A special diet kitchen, where a course of instruction in cooking may be taken, is a necessity, and would prove valuable to the pupils in their present and future work.

As we always have sick children in the various wards, it would be an advantage for the nurses, and a great benefit to the children, had we a children's ward; it being impossible to properly care for these little patients in their present environment in the general wards.

The last course of lectures began in April, 1897, and closed July 1st. Examinations, written and oral, will be given to the nurses during the first weeks of September of this year, the result of which will grade the nurses according to their efficiency.

As nearly as possible the same subjects have been taught in class, including clinical teachings and demonstrations in the amphitheatre, by the Principal of the Training School as those taken up by the faculty in their lectures. In this course no nurse knew beforehand what she would be called upon to do; preparation for different operations was gone over in detail, and this drill not being formal the pupils were allowed to criticise one another and make suggestions, while the principal emphasized the main points of the work. In addition, instruction in massage and in cooking has been given by the Principal of the Training School.

The Hospital and Training School feel greatly indebted to Major Hooper and the management of the Occidental Hotel for generously tendering the parlors and hotel service for our benefit at various times. The Training School also wishes to thank those who so efficiently contributed to the very enjoyable program:

Mrs. George H. Powers,
Miss Hilda Newman,
Miss Evelyn Henry,
Miss Lillenthal,
Miss Marie Wilson,
Mr. Henry C. Merrill,
Mr. George B. Wood,
Mrs. R. Hochstadter,

Miss Lillian O'Connell,
Mrs. Sroufe-Loosley,
Miss Madeline Beckhusen,
Mr. W. A. Sabin,
Mr. Frank Coffin,
Mr. W. J. Andrews,
Dr. Gregory Flesher.

PATRONESSES.

Mrs. M. B. M. Toland,
Mrs. Robert McLean,
Mrs. George H. Powers,
Mrs. Selden S. Wright,
Mrs. C. N. Ellinwood,

THE FOUNDING OF THE TRAINING SCHOOL FOR NURSES.

The San Francisco Training School for Nurses was established in August, 1891, this being the first effort to bring the trained skill of the Eastern schools to bear upon the amelioration of the dependent afflicted in this Western metropolis. Briefly stated, during the previous year Mrs. J. G. Lemmon of Oakland was cared for through a severe illness, and her life no doubt saved through the skillful services of Miss Ida M. Forsyth, a graduate nurse from the famous Blockley Hospital of Philadelphia. Grateful for her own recovery, her solicitude for the welfare of others became greatly enhanced; and with her, desiring and doing are coincident as a general rule. Consulting with Miss Forsyth, it was decided to visit the City and County Hospital of San Francisco, this being the largest institution of its kind on the Pacific Slope, and one that would afford the best opportunities for clinical instruction and experience. The Superintendent Physician, Dr. C. S. Healy, welcomed these earnest women cordially and the subject was laid before him. Though evidently appreciating to the full the value of special and thorough training to prepare nurses for the proper care of invalids, he at first thought such a school would not be feasible in the City and County Hospital, because of the lack of suitable rooms for their accommodation and funds to carry on the work. During a subsequent interview, however, when Mrs. Lemmon introduced Miss Forsyth, it was discovered that the importance of instituting a training school in the hospital had grown in the Superintendent Physician's estimation—for he had already applied to the Board of Health and the Board of Supervisors for their approval and assistance. The Superintendent Physician found that a majority of the Board of Health (not including Mayor Sanderson, who was heartily in accord with the project from the first) were still undecided upon this innovation. They cited in objection the impropriety of placing young women in a hospital of mixed patients, the want of proper rooms, and lack of funds. Perhaps the chief objection, though unstated, was reluctance on the part of the Board to remove from the hospital wards the old-time nurses who, though inefficient, and some of them often intoxicated, were nevertheless persons of influence in political circles. The objectors were called upon again and again, and the various objections were gradually overcome, particularly that of placing young women in such positions, this being clearly demonstrated as having already passed the stage of experiment and become an unbounded success in similar institutions in the East. About this time Dr. Healy, the Superintendent Physician, had found rooms in a wing of the Hospital that might perhaps be made available for living quarters. He invited inspection of them, and they were pronounced suitable. These rooms, the same now occupied by the Training School, were then used in part by certain employees of the hospital, and it was not without loud protest that they were transferred to other quarters.

The rooms were devoid of furnishings of any kind, and Mrs. Lemmon, often accompanied by Miss Forsyth, set about soliciting aid from her friends and citizens of San Francisco, who responded generously, and these persevering women were finally successful in procuring various articles for furnishing the rooms with some degree of comfort. A careful account of all articles and money so contributed was kept and the names of the donors preserved. No sooner was the School in active operation than it was discovered that its establishment was a decided measure of economy. Heretofore the patients had been committed to the care of untrained nurses, employed at wages of from \$20 to \$75 per month, while the

pupils of the training school receive the nominal sum of \$10 per month after having given three months free service—a large saving in favor of the Training School.

The work of the School within a few months after its inauguration with even the small number of young women under the careful supervision of Miss Forsyth and her assistant, Miss Elise K. Mohl, eventuated in great improvement throughout the hospital. Neatly attired nurses were constantly on duty in the various wards and where formerly the medicines were kept on the table at the bedside of the patients, who helped themselves at will, the drugs were placed in closets under lock and key to be carefully measured and administered in the exact doses prescribed by the physicians. Neat charts were also seen at the heads of the beds where the nurses kept record of temperature, respiration and pulse, an indispensable requisite in the treatment of many diseases, especially fevers. The surgeons were also quick to appreciate the careful and intelligent preparation of patients for operations, and watchful care during the critical hours following. One of the leading physicians remarked that before the advent of the training school he often found it difficult to distinguish between a nurse and patient, as patients were often trying to nurse each other.

In the year 1891 twelve nurses only were enrolled. In 1892-94 the number averaged 16. This number was recognized by the Board of Health as entirely inadequate for the work of the hospital. Up to 1895 no appropriation had been made to meet the expense of a larger force of nurses, although the Board of Health in office at that time was very willing to increase the nursing staff, but had no funds on hand for such purpose. In October, 1895, and April, 1896, two musicales were given at the Occidental Hotel under the auspices of the leading society women of San Francisco, the proceeds (\$217.00) to be utilized for dormitory furnishings. This enabled us to accommodate nine more pupils, increasing the number of pupil nurses from 19 to 28. The names of the patronesses and artists who so generously gave their time and interest will be found appended hereto.

With the increased number of nurses the advantages to the patients are many; the relief to the nurses scarcely perceptible. The night force was increased from three to six, and frequently eight. A senior nurse is detailed as Night Superintendent of Nurses, directing the work and seeing that all emergencies arising during the night are properly met.

Critical medical and surgical cases, demanding extra care are furnished with special nurses, an arrangement impossible when the school numbered but nineteen pupils, the custom then being to strap or tie down delirious pneumonia and typhoid patients.

ANALYSES RECEIVED—CONTINUED.

ANALYSIS.	ADULTERATIONS.
Itemized analysis not reported.....	$\frac{3}{4}$ apple and $\frac{1}{4}$ blackberry jelly.
Itemized analysis not reported.....	Apple jelly artificially colored and contains starch.
Itemized analysis not reported.....	Apple jelly, colored with coal tar color.
Itemized analysis not reported.....	$\frac{3}{4}$ strawberry and $\frac{1}{4}$ apple jelly.
Itemized analysis not reported.....	Pure.
Itemized analysis not reported.....	Apple jelly, artificially colored.
Itemized analysis not reported.....	Apple jelly, artificially colored.
Itemized analysis not reported.....	$\frac{1}{4}$ currant, and $\frac{3}{4}$ apple jelly.
Itemized analysis not reported.....	Pure.
Itemized analysis not reported.....	Pure.
Itemized analysis not reported.....	Pure.
Itemized analysis not reported.....	Pure.
Itemized analysis not reported.....	Quince jelly, containing some starch.
Itemized analysis not reported.....	Apple jelly, color'd with coal tar color.
Itemized analysis not reported.....	Apple jelly, artificially colored.
Itemized analysis not reported.....	Starch jelly with tartaric acid.
Itemized analysis not reported.....	$\frac{1}{4}$ currant and $\frac{3}{4}$ apple jelly; contains starch.
Itemized analysis not reported.....	Apple jelly, with tartaric acid.
Itemized analysis not reported.....	$\frac{1}{4}$ currant and $\frac{3}{4}$ apple jelly.
Itemized analysis not reported.....	Apple jelly, artificially colored.
Itemized analysis not reported.....	Apple jelly, artificially colored.
Itemized analysis not reported.....	Apple jelly, artificially colored.
Itemized analysis not reported.....	Pure
Itemized analysis not reported.....	Apple jelly, colored with coal tar color.
Itemized analysis not reported.....	Passed into a state of fermentation—is pure, but on account of its having spoiled, is not fit for food.
Itemized analysis not reported.....	Pure but old.
Itemized analysis not reported.....	Pure but old—shows signs of fermentation—should not be sold to consumers.
